- All 21 modules are fully collapsible
- Header position width option setting on template configuration
- Impressive built-in content style
- 2 built-in menu options - Suckerfish menu and Mootools
- 34 different styles moomenu animation effects.
- Speed menu animation option
- Optional IE6 Warning / Upgrade Notification
- Lightweight, modern and very fast-loading design
- Joomla 1.5 Native
- W3C XHTML 1.0 Transitional. W3C CSS Valid
- Fully compatible IE7, Firefox 2+, Firefox 3, Flock 0.7+, Netscape, Safari, Opera 9.5
- Delivered with source Adobe .PSD
- Delivered with "Quick Start Pack"

AUMI - Overview files

! Sugestion! After downloaded the Gavick Aumi Template Package file available on our Exclusive Membership download section and before start the brief overview of the respective files, here a suggestion for those how are interested in a easy and quick installation of this template, in order to see it exactly as we show in our demostration page - demo.gavick.com. If you are this person, jump directly to Chapter 10 to see how to install the QuickStart package. Them you can return to the begging of this Manual to check how all tools work.

Here's a brief overview of the files available inside the AUMI Template pack release.

You downloaded the following two compressed files:

gk_aumi_J!15.tgz - This is the template file installation.

gk_aumi_J!15_rest_files.zip **!** Important! Unpack the gk_aumi_J!15_rest_files.zip package..

After unpack the gk_aumi_J!15_rest_files.tgz you will find the following "rest_files" folder containing:

Components "folder"

com_gk2_photoslide.zip - This is the New PhotoSlide GK2 component version.

plugins_extensions "folder" - Contains the following files:

- ext_rainbow.zip - New extension RainBow colorpick tool.
- plg_gk_news_image_1.zip - Plugin for New Image 1 Module (for PhotoSlide GK2)
- plg_news_show_gk3.zip - Plugin for News Show GK3 Module (for integration with PhotoSlide GK3)

Modules "folder" Inside you will find the following files:

- mod_gk_news_image_1.zip - The recoded version for the new PhotoSlide GK2 Component, with exclusive style design the AUMI Template.
- mod_news_show_gk3.zip - The New version GK3 of this popular and amazing module for content display

_quickstart!!! "folder" This is the most easy way installation process! Includes all files needed to set exactly as we show in the demo Aumi template, like sugested previously.

Source "folder" The source psd. format files for Photoshop Graphic Editor, that you can use for complete customization of your website design.

_doc!!! "folder" Manual Instruction HelpFile.

! Notice! The font type used on the Photoshop source files are not provided with the Template package.

3 Template installation

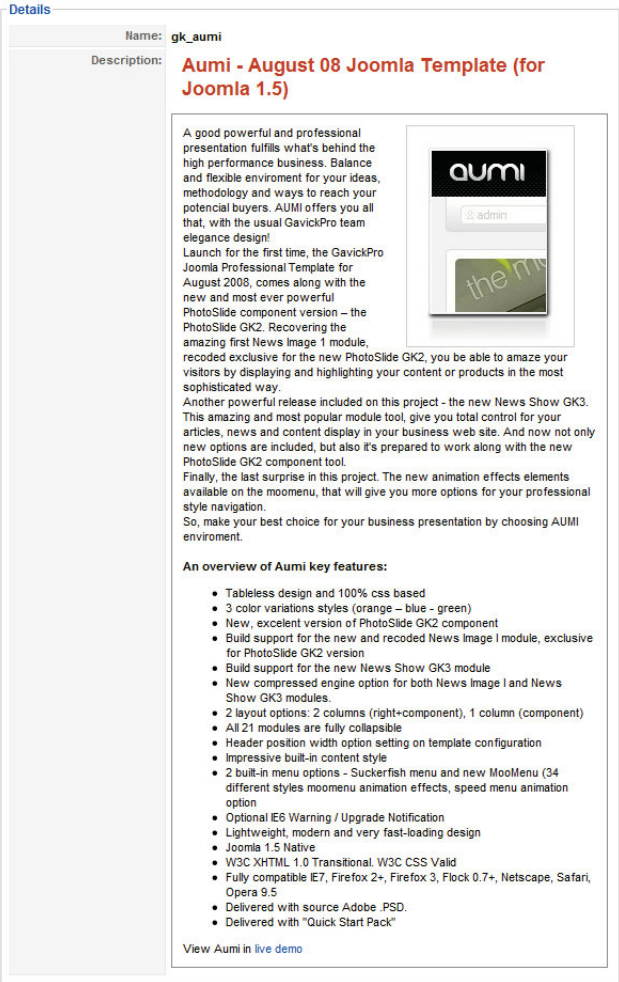
Navigate to your Joomla! Administrator and enter in the administrative panel on your Joomla site.

From the top menu, select Extensions > Install/Uninstall.

Click the 'browse' button, select the template file *(gk_aumi_J!15.tgz)* and press 'Upload File & Install.'

A message will appear saying 'Upload template - Success.'

This page will display an overview of the template, then select 'Continue...'



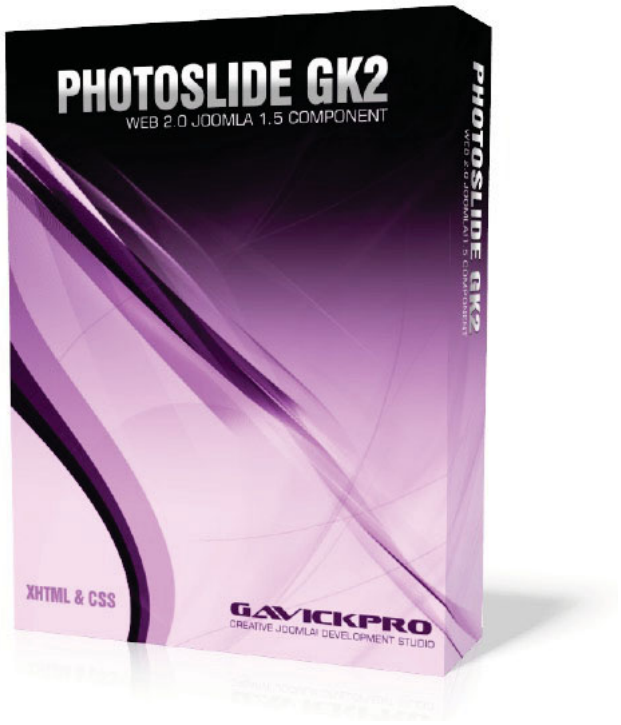
After the template is sucessful installed, you must set it as your default template. To do that, navigate to Extensions > Template Manager and set the Aumi Template as default joomla template.

With the template installed, next we are going to explain how to install the others files needed (components, modules and plugins).

PhotoSlide GK2 - Component introduction

Release for the first time, along with the AUMI Template, the new and improved version GK2 of the Gavick PhotoSlide Component.

PhotoSlide GK2 is the most advanced free joomla component that will help you to present in an eye-catching way your articles, products, stories or events in your website, using dazzling slideshow images integrated with your features content. Provided with News Image 1 Module with specific high quality style design for AUMI Template, the Gavick PhotoSlide GK2 will captivate full attention of your website visitors.



Notice! The following instructions will be also available more detailed in the PhotoSlide GK2 Help File that you can find in tools.gavick.com for free download.
Another important information is available on update.gavick.com, where you can find any update for this tool or any other Gavick Project.

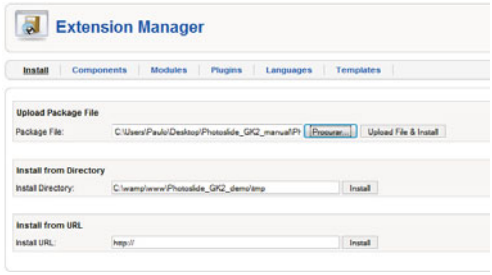
PhotoSlide GK2 Installation

Using the Joomla! 1.5 Administrator, navigate to the administrative panel on your site. From the top menu, select Extensions > Install/Uninstall.

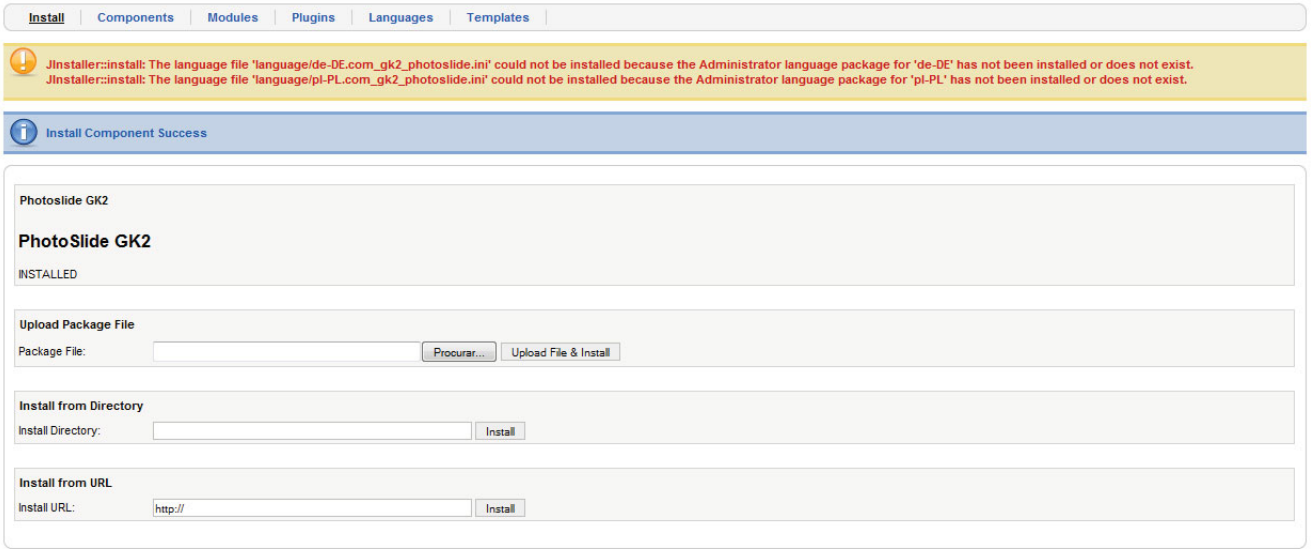
Click the 'browse' button, select the component file *(com_gk2_photoslide.zip)* and press 'Upload File & Install.'

A message will appear saying 'Component - Success.'

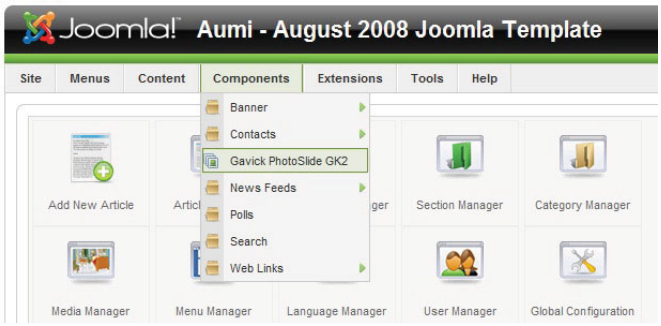
This page will display an overview of the template, then select 'Continue...'

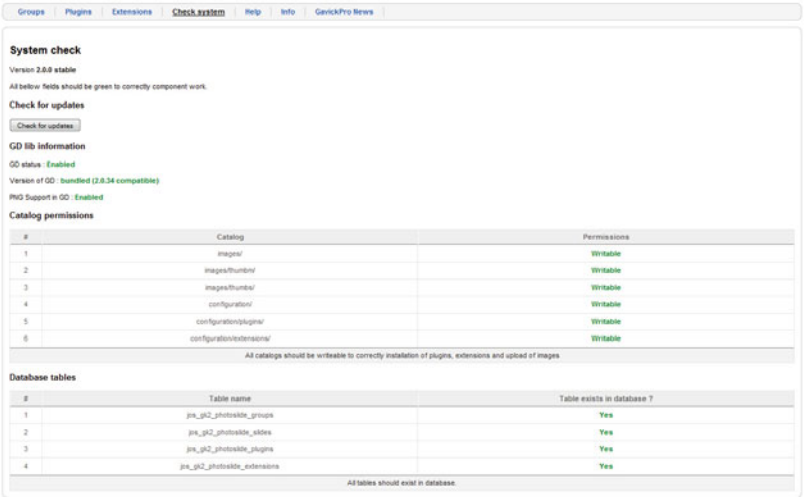


Notice! One of the new features of the PhotoSlide GK2 is the possibility to work with diferent language beside english. The component comes along with translation files like German, Italian, Polish, Portuguese and in the future, others will be included. So, after the installation process is done, you should see some messages indicating that it was not posible to create some language files. Don't worry, because this notices are quite normal. If you don't have in your Joomla Web site those languages, naturally the setup of the component will not be able to install those files.



Important ! The next step after an sucessful installation process, it is strongly suggested that you should first check the system of the component in your web site. Navigate to the main page of the component by going to Components > Gavick PhotoSlide GK2 *(if you followed the installation instructions above this option should be in the list of components)*. There's an option on the main menu - "Check System" - that will show you if all conditions are set correctly on your joomla installation, marking on the right panel with green color the right conditions on folders permissions and if the needed tables were created in your database.

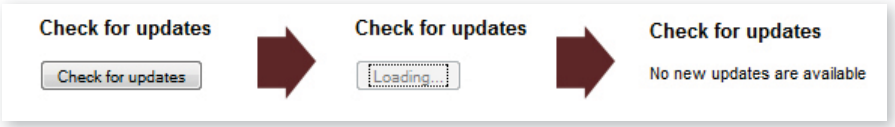




When checking the system, if some field's are with red text colour on the permissions column, you should test the uploading images, because in some cases it may shows initially the warning information, but after doing some tests, it will work perfectly.

Also, in check system, page it will display more informations about GD Library (open source code library for the dynamic creation of images).

Another nice improvement added on the "Check System" panel is the possibility to verify automatically if there's a new version or upgrade to the component. This information is easily provided by pressing the "Check for updates" button that will comunicate directly to our server update.gavick.com.



News Image 1 plugin - Installation

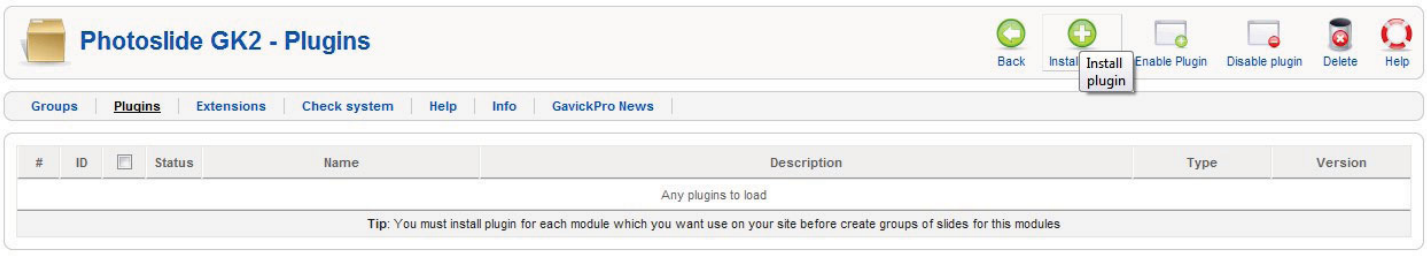
(for News Image 1 module)

Important! Before installing any module, it's absolutely necessary to have installed the respective plugin in the component. It will allow communication interface between the module and component.

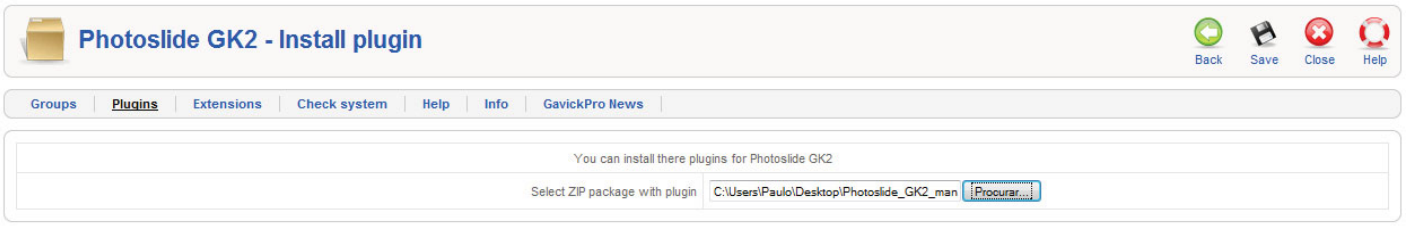
Recommendation! If you disable an plugin installed *(not UNISTALL)* them this plugin is invisible on the list of types of groups when select add group option. If you delete an plugin installed, them all groups, slides and images will be deleted also. So, we strongly recomend to disable the plugins instead of deleting them, if you have unused plugins.

Unlike the previous version of PhotoSlide Component that was necessary to upload/install two files separately in XML and PHP format, in this new version that will not be necessary, because the plugin is provided in one single compressed file and only this one will be upload and install, without any unpack action.

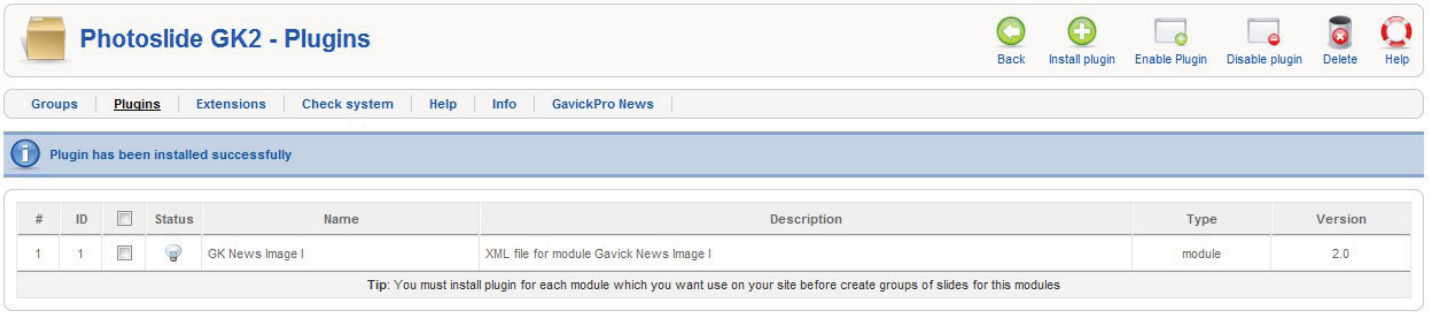
After this brief introduction, let start the installation. Returning to the PhotoSlide GK2 administration panel, select the "Plugins" tab link. You should see the plugins administration panel with the message "Any plugins to load" because there's none, naturally.

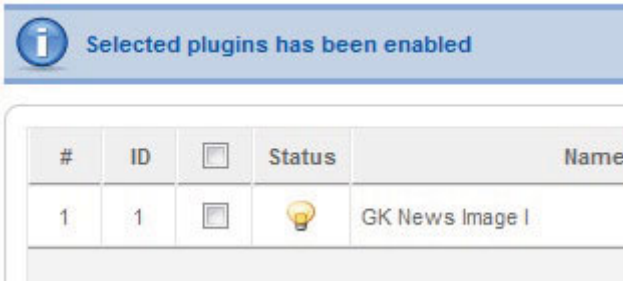


Them select “Install Plugin” option on the right menu, seach the respective plugin file on your computer and upload/install.



If you follow the installation instructions above, you be able to see the plugin available on the panel, but notice that is status indicates that it’s not enable. To enable it, select the plugin by clicking on the checkbox and them press “Enable Plugin” on the right menu.





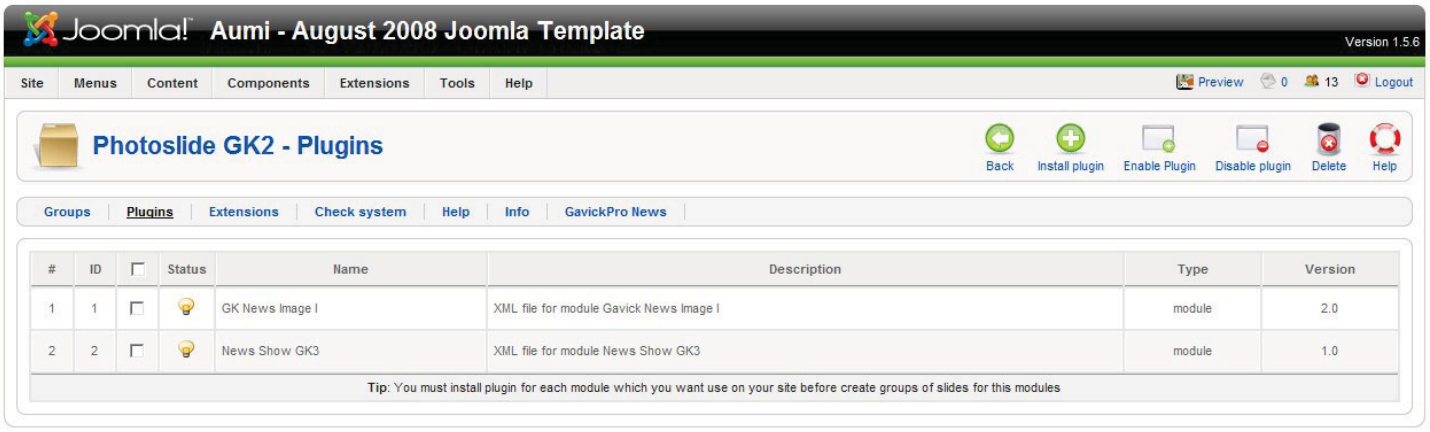
The status bottom icon with inlight, indicating that the plugin is enable and available on the PhotoSlide GK2.

News Show GK3 1 plugin - Installation

for News Show GK3 module)

The installation process for this plugin on the PhotoSlide GK2 is exactly the same as previously explain. So, return to the PhotoSlide GK2 administration panel, select the "Plugins" option again, use the "search" field and select the plg_news_show_gk3.zip file located on your computer. Upload this file and enable also.

You should now have the 2 plugins necessary for this template, like the screenshot shows.



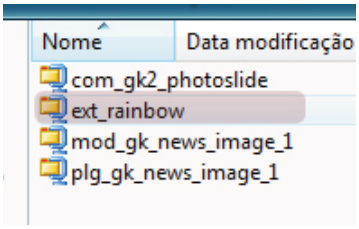
Extension installation for PhotoSlide GK2

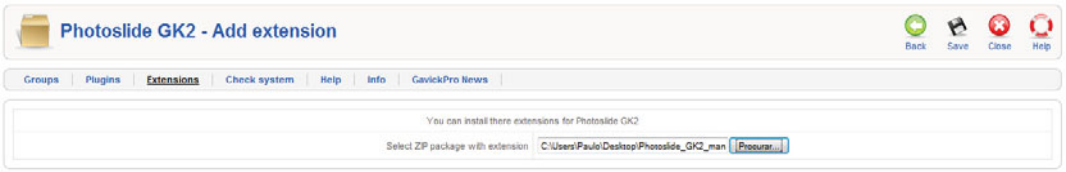
This is a new and nice improvement that we included on this version of PhotoSlide. Now, beyond the plugins integration, you can extend more the PhotoSlide by using specific extensions that will create new and rich interface elements. Despite this is an optional step, you can benefit using this extension on the PhotoSlide administration. For now, we only provide one - the Rainbow extension- a nice colorpicker tool that will help users to easily pick up the wanted hex colour code and pasted on the parameters definitions groups fields.

Returning to the PhotoSlide GK2 administration panel, select the "Extensions" link on the menu. Again, you should see the extensions administration panel with the message "Any extensions to load". Let's install the rainbow extension and the process could not by more easier, because it's exactly the same steps as we did previously on the plugins.

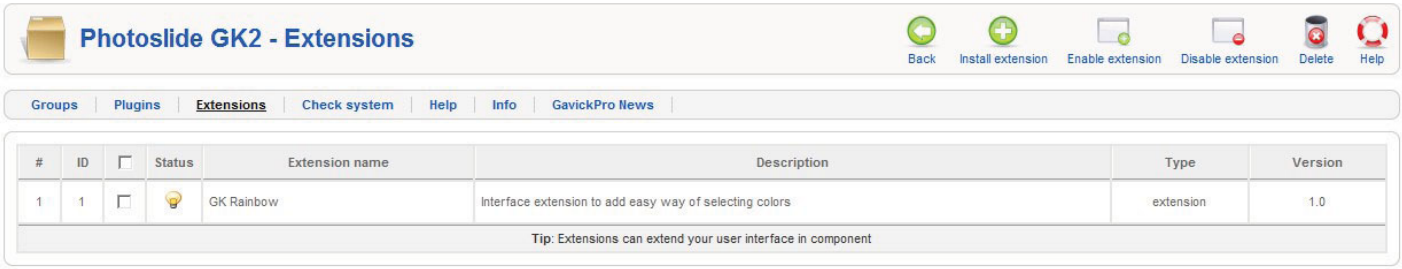
Select "Install extension" option on the right menu

Seach in your computer the ext_rainbow.zip file, select it, upload and install.





At this moment, you will be able to see the extension available on the panel. Once again, it's necessary to enable it if we want to use it. Select the extension by clicking on the checkbox and them press "Enable extension" on the right menu.

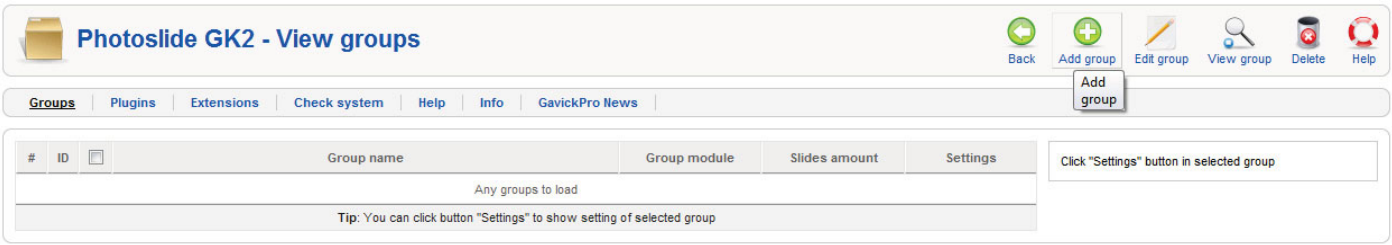


You can use this tools, when creating / editing groups or slides in the PhotoSlide GK2 administration.

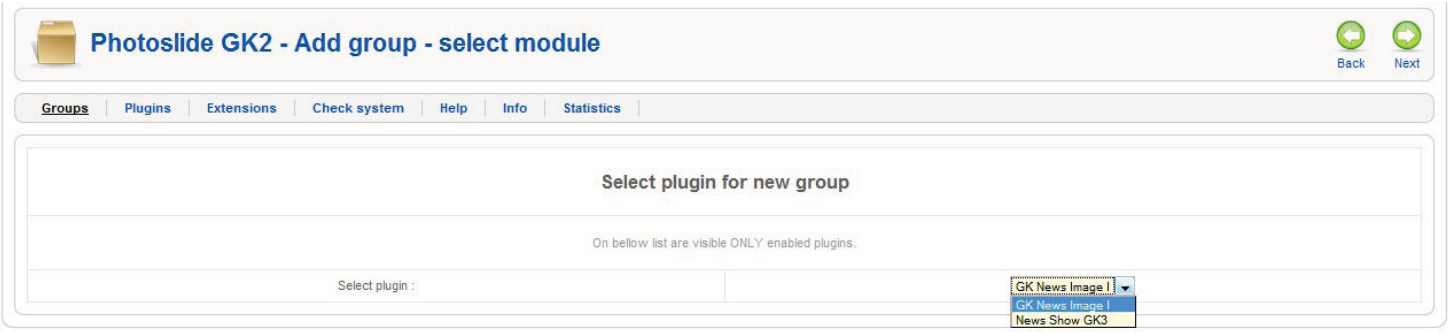
Add Group for News Image 1

Now, you are ready to add groups to your PhotoSlide GK2 component.

Let's start by creating a group for the News Image 1 module. Navigate to Components > Gavick PhotoSlide GK2 and press on the right menu the "Add Group" button.



Since we install previously two plugins, so it's necessary to select the respective plugin for the group. In this case, select Gk News Image I plugin, in the drop menu on the right side.



In this page, we need to fill all the parameters fields to set the main configuration of the group.

Group name:

For identification of the group, that will be necessary on the module configuration.

Image Quality (0...100%):

This is a new feature that will give another important control for the user. If there's a group with a big number of slides to be display, naturally we want to avoid most posible, long time loading page. So, we can use this option to increase speed loading of the module, by decreasing the image quality percentage to maximum, without cross over the fair quality needed, of course.

Image Width: The width value in pixels of the image.

Image Height: The height value in pixels of the image.

Thumbnail Width:

The width value in pixels of the thumbnail (in this case, available for the News Image I module).

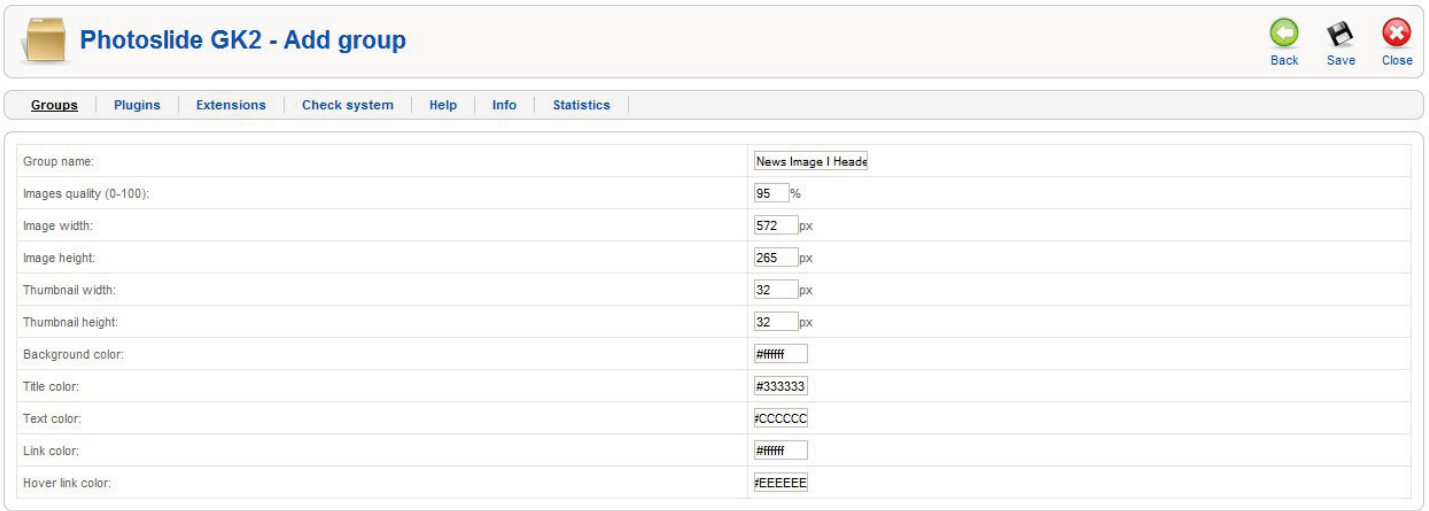
Thumbnail Height:

The height value in pixels of the thumbnail (in this case, available for the News Image I module).

Background color:
Title color:
Text color:
Link color:
Hover Link color:

Remember the Rainbow extension ? Here you can put it in action by simply clicking inside each requested color fields and easily select your desired color. The hex code will be immediatly available.

See the following screenshot with the demo example settings:

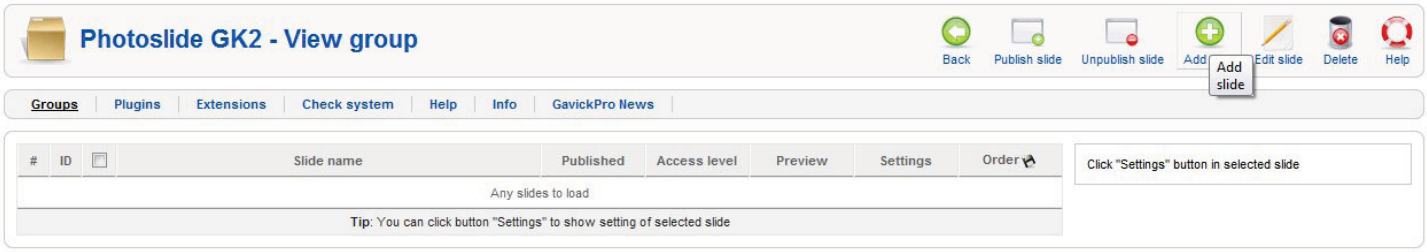


After setting all requested fields, save the group.

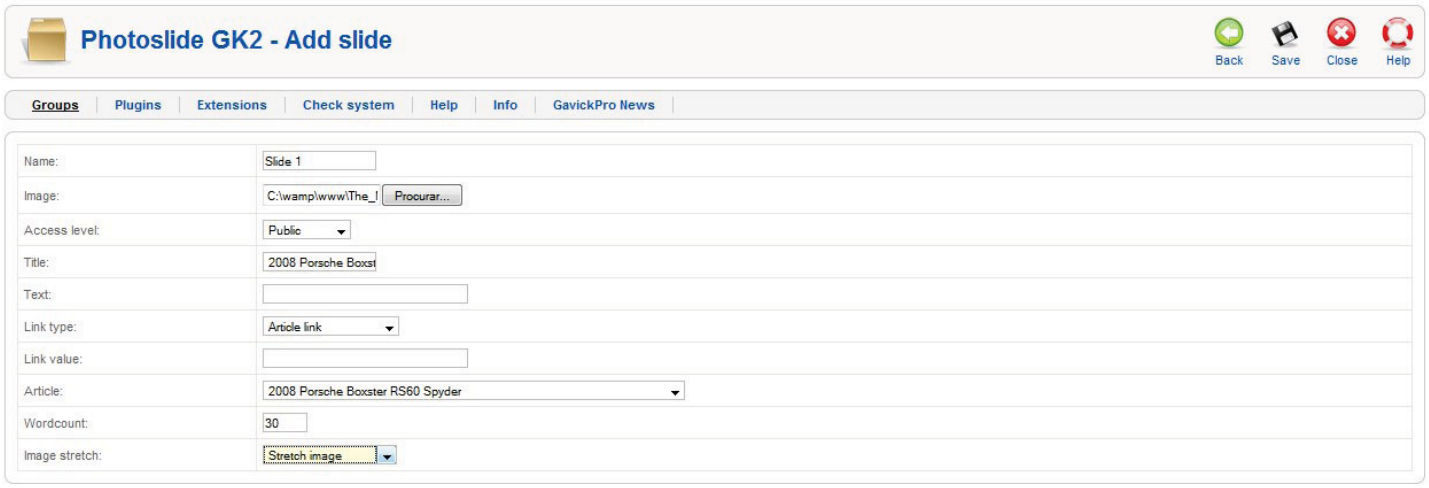
You be able to edit this values later, if you want.

Add Slides to News Image 1 Group

It's all set with the group, so let's start creating slides on it. Press the link group and inside you will see the group slides content. Naturally, at this time it doesn't show anything. Press the "add slide" option on the right menu.



Set the following parameters provided by the News Image I plugin.



Name: The name that you want to give to your slide *(just for your orientation)*.

Image: Search and choose your image on your computer to upload.

Access Level: This new feature gives us the possibility to set a level access to the slide.

Title: The title of the slide to be show on the module display *(if you choose bellow you own title and text display)*.

Text: The text of the slide to be show on the module display *(if you choose bellow your own title and text display)*.

Link type: Set if you want your own link or the link of an existent article.

Link Value: If you choose previously your own link type, set it here or leave it blank if you didn't *(ex. http://mylink.com)*.

Article: If you choose an article link, set it here or leave the "Your own title and text" set.

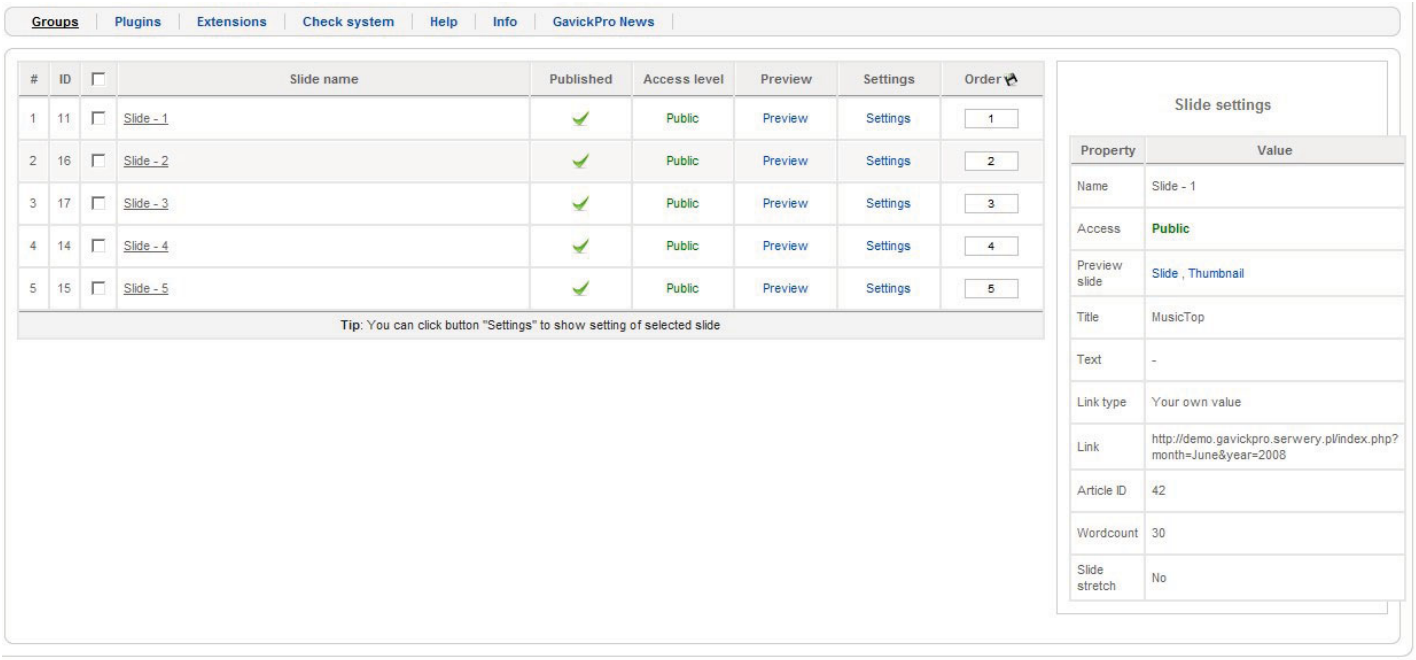
Wordcount: Set the number of words to be display on the slide from the article or from your text.

Image Stretch: If you have an image smaller or bigger from the module display option, choose "Stretch image" and this will automatically reset the image dimensions to fill totally the module. This option may withdraw some quality image if the same have some dimension not proportional from the module. If you have a image with same dimension set on the module, set it "Don't stretch image" option.

After you add all your slides content on the group, you can rearrange the order of the slides as desire.

After all slides are done, this is the example of the slide page group display for the demo.

Notice! that at in the right side, there's a panel displaying the slide settings. This is a new AJAX option available on the PhotoSlide GK2, that will provide you easily the configuration of any group or slide, without entering in the "edit" option. Also, you can preview in a popup window the main image or the thumbnail created.



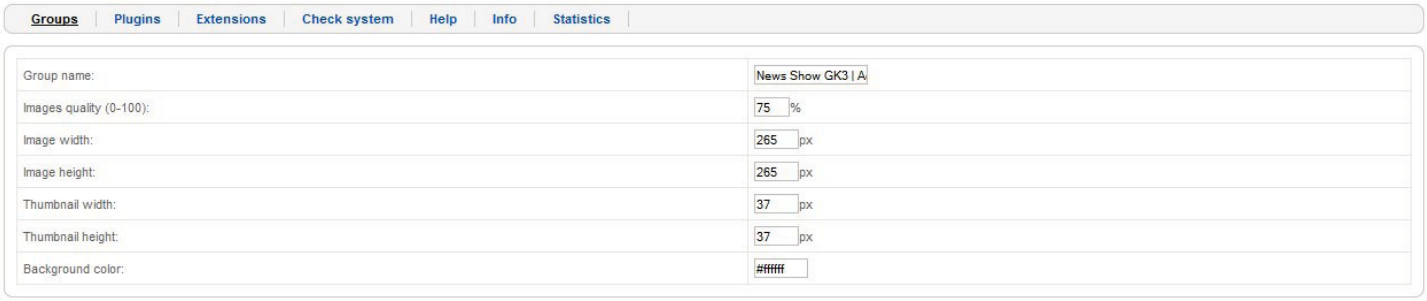
Add Group for News Show GK3

You can follow the steps that we took on the procedure to Add a Group for the News Image I module. It's exactly the same!

Navigate to Components > Gavick PhotoSlide GK2 and press on the right menu the "Add Group" button.

This time, select the News Show GK3 plugin available on the drop menu on the right side.

Set the following parameters on the configuration of the group, provided by the News Show GK3 plugin.



Add Slide for News Show GK3 Group

Again, the process of adding slide to the group it's the same previously explain.

Navigate to the groups panel on the PhotoSlide GK2 administration and press "Add Slide" option. You will need to set the following parameters fields, but with some exceptions to considerate that i will next explain .

Name: The name that you want to give to your slide *(just for your orientation)*.

Access Level: This is a nice option that you can set, by selecting the level access for each news image article.

Image Width - Image Width - Thumbnail width - Thumbnail height :

Notice that in the screenshot above, this fields are set with "0" value. That's because image size which is set in module is connected with images from articles and not from Photoslide. By setting values here, will be usable when you need in the News Show GK3 module diferent size image display.

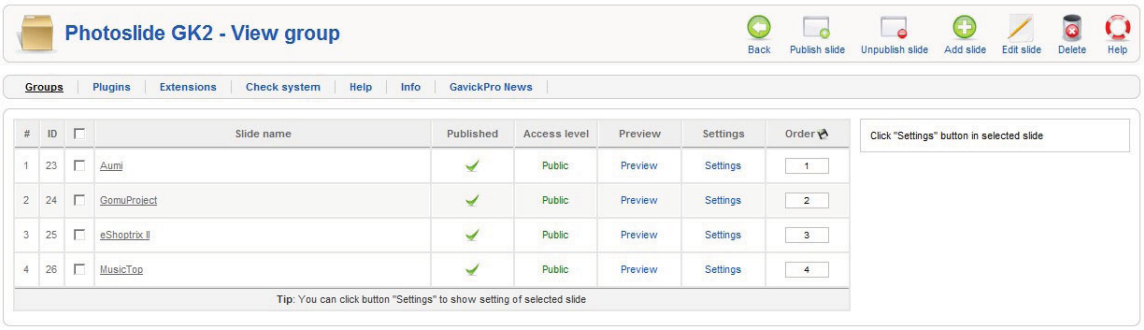
Article: Here's the sniper for the article.

Image stretch: The text of the slide to be show on the module display

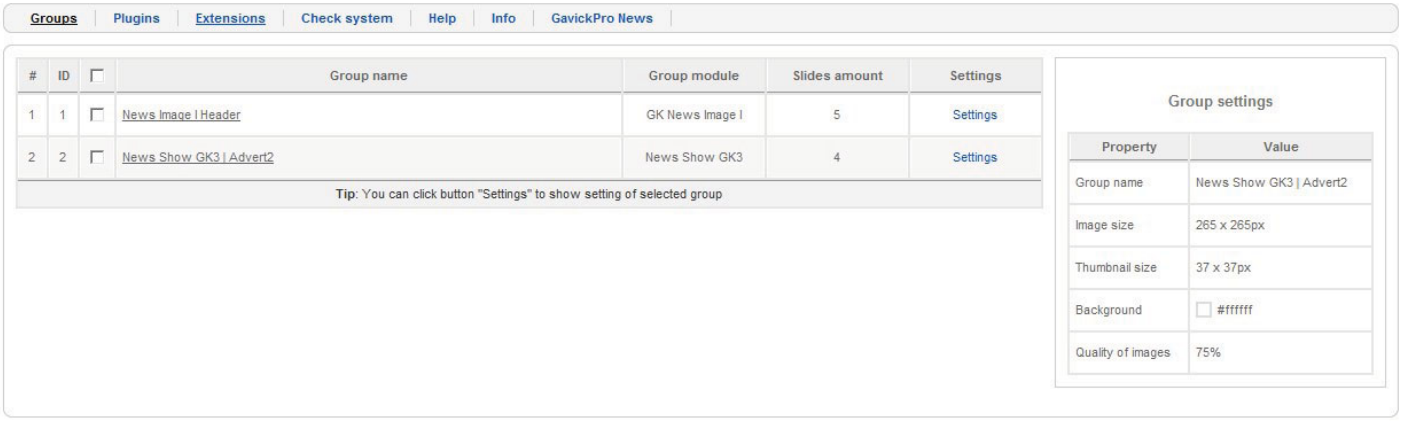
Tip! You can can create different images for articles for different access levels.

Warning! It is very important to have set ONLY one image in Photoslide connected with one article - if you set more images connected to same article, most probally will cause some problems. The only exception is when is created with diferent level access.

Example use in the demo template, with 4 images connected to the respective articles.

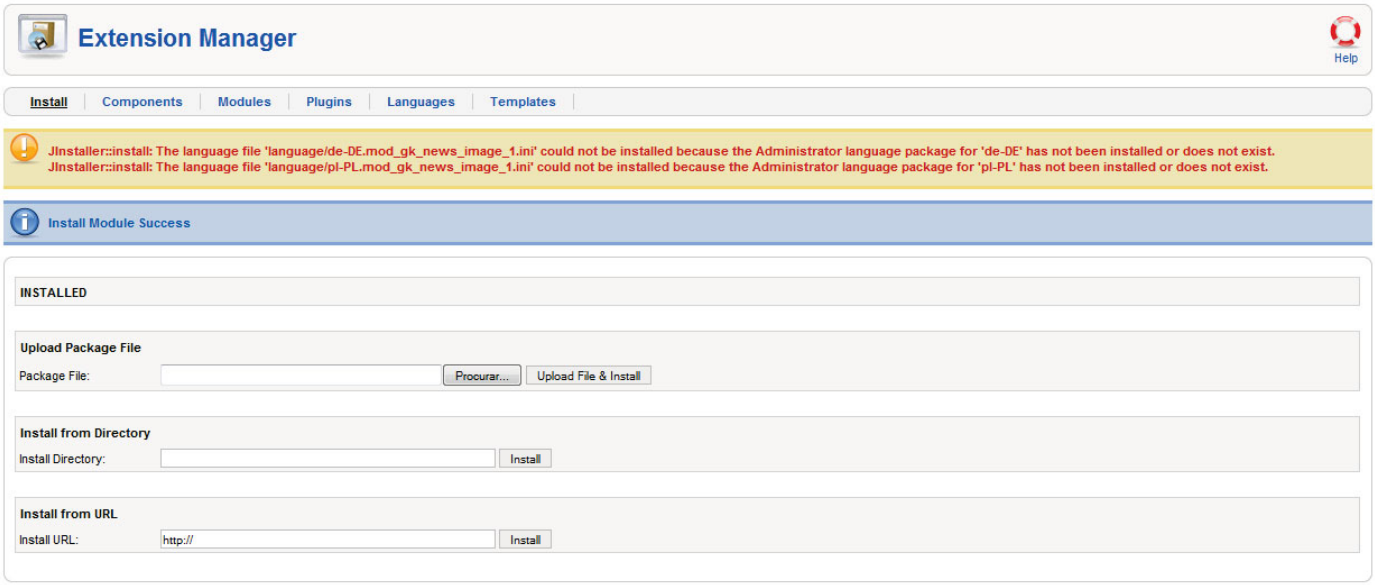


Now that the groups are created and configurated, again you can make use of the new feature that we include on the PhotoSlide GK2 administration. By clicking on the link “Settings” in the right column, you have an AJAX preview of the settings in the group, like the screenshot indicates.



News Image I module installation

From the top menu, select Extensions > Install/Uninstall. Click the 'browse' button, select the News Image I package file *(mod_gk_news_image_1.zip)* and press 'Upload File & Install.' A message will appear saying 'Install Module Success.' them select "Continue..."



Notice that, once again, you will see some warning messages, saying that some language files were not installed. Remember that this is perfectly normal, because if you don't have those language on your Joomla!1.5 web site, the setup file will not be able to create this files.

It's time to configurate the module and put it working on the frontpage. So, navigate to >Extensions > Module Manager, find the Gk News Image I module and enter.

Now, we will show you how to configurate the News Image I module - specific version for AUMI Template, with lighter setting option for template style design.

News Image I module configuration

Set the module in the “header” position and enable it. But before you save it, you must configurate the following parameters fields.

Module parameters:

Module Class Suffix:

A suffix to be applied to the css class of the module (table.moduletable), this allows individual module styling

Module Unique ID:

Unique ID for module (must be unique if you have two or more modules running on one page)

Slides Group:

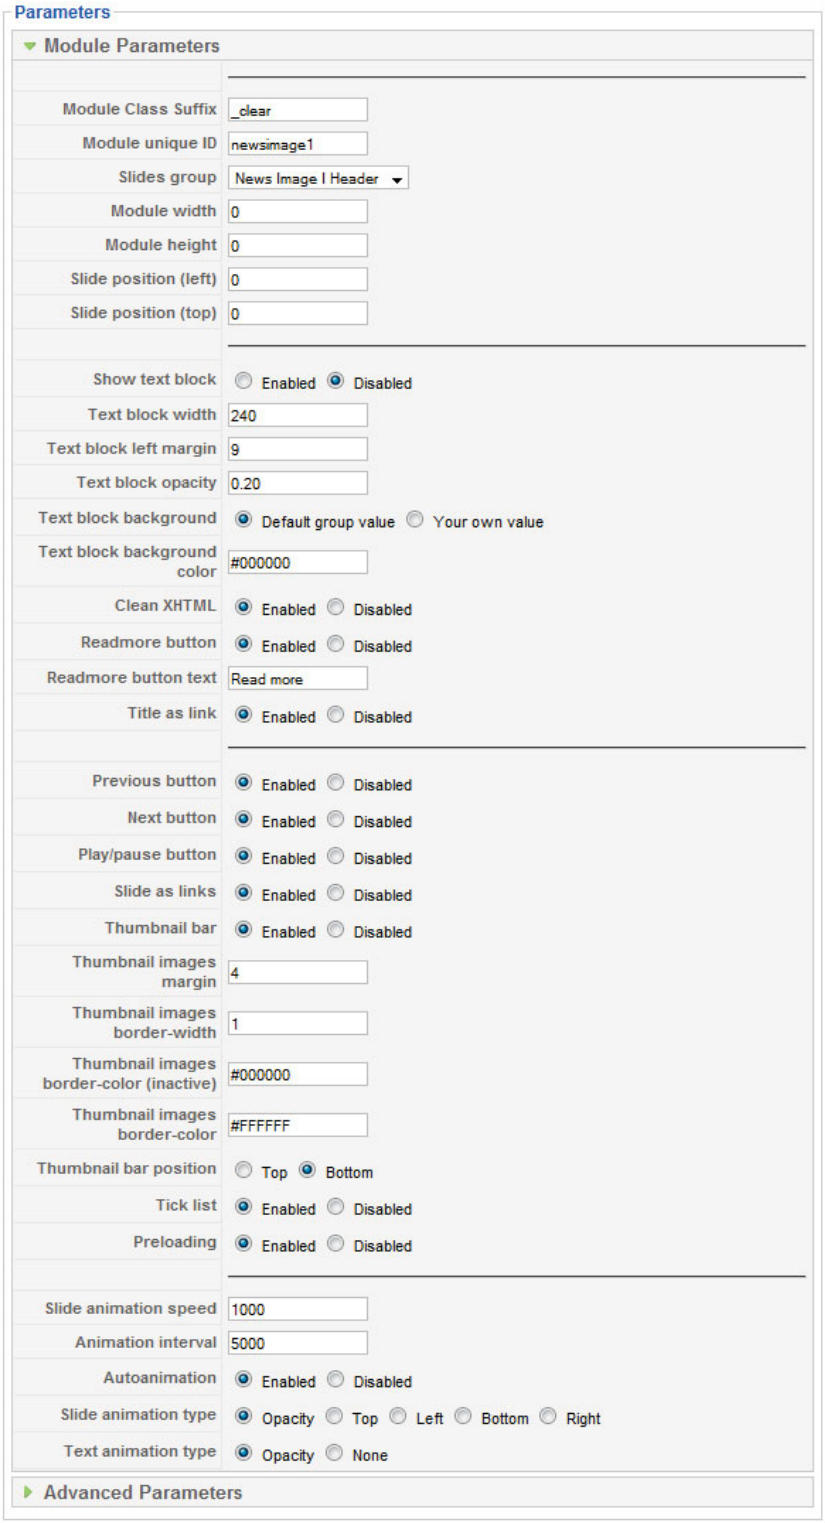
For those who already experienced the previous PhotoSlide GK1, you may remember that we used an integer value to identify the group. Now, it’s different, because all the name groups available will be show on a drop menu. Just select the one that you will use.

Module Width and Module Height:

If you want to set different width than value set on the Photoslide Administration Group. If not, just leave it and mantain 0 value.

Slide position (left and right):

This is another new feature. It gives you the possibility to move the slide image position inside the module area. With this option, you can customize some different styles display, playing with the background color and, for example, with the Ticks position.



Text Block width:

Set here the text block width to be displayed on the module.

Text block margin:

With this option, you be able to move the position of the text block from left to right.

Text Block Opacity:

The opacity of the background of the text block *(values from 0.00 to 1.00).*

Text block background:

You can select default background from group settings or your own value.

Text block background color:

If you choose "Your own value" in previous option, set here in hex code the color desired.

Clean XHTML:

You can clean your articles from any formatting.

Read more button:

Condition: if you want to show readmore button.

Read more button text:

Set it, for example, with your own native language.

Title as Link:

Condition: You can enable link in header of article in text block.

Buttons: Previous, Next and Play/Pause:

Conditions: Turn ON / OFF the navigation icon buttons.

Buttons margin right:

Set margin beetween interface buttons and module right side.

Buttons margin bottom:

Set margin beetween interface buttons and module bottom side.

Slides as Links:

Switch ON click events for slides (images as links).

Thumbnail bar:

Switch ON/OFF the thumbnails bar (available in this case, for the News Image I module. You may find this option on others or not.

Thumbnail images margin:

Set margin between thumbnails images in thumbnail bar.

Thumbnail images border-width:

Set border width for thumbnail image.

Thumbnail images border color (inactive or active):

Set in this two fields, in hex format, the border colors for better signal navigation.

Thumbnail bar position:

You can see it the top or bottom position, inside the module display area.

Ticks list:

Condition: Enable or not the use of this new feature. The Ticks List, that will be another interface navigation option for the slide sequence indicator or selection.

Ticks margin left:

Set margin beetween ticks buttons and module left side.

Ticks margin top:

Set margin beetween ticks buttons and module top side.

Preloading:

New feature! Now use have a preloading option.

Slide animation speed:

Speed for animation effect of the slides (example: 1000 = 1 second).

Animation interval:

Interval beetween slides (example: 5000 = 5 seconds).

Autoanimation:

Condition:If you want to start animation automatically.

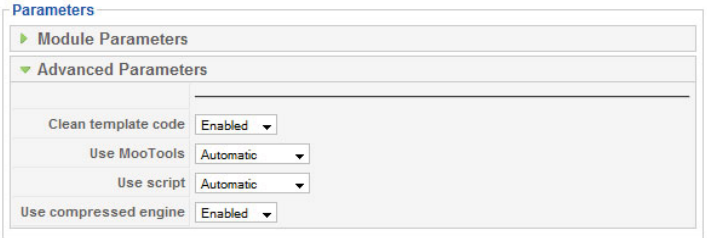
Slide animation type:

Slide effect for module (Opacity - Top - Bottom - Right).

Text animation type:

If you want to enable effect for text.

Module advanced parameters:



Clean template code:

Now modules support new technique of assets JavaScripts files. If you want to get rid all configuration scripts to imported scripts then enable this option. Value disabled means that configuration scripts will be placed in template code (old method).

Use Mootools:

Use this option only if you have a problem with scripts on your site. In other situations option automatic is strongly recommended. If you want to run more than one copy of this module on same page then set this value for disabled. Also if you have an mootools framework in version 1.11 included on your site, then disable this option also.

Use script:

In normal situations, option “automatic” is strongly recommended. Use this option only if you have a problem with scripts on your site. If you want to run more than one copy of this module on same page, then set this value for disabled.

Use compressed engine:

To minimise file size you can use compressed version of engine, but for debugging you should use uncompressed version of engine script (then disable this option). Additionaly - when you use more than one copy of this module per one page, then you must set this same value of this option for all instances of module.

News Show GK3 Introduction

One of the most popular Gavick tool and perhaps the most powerful module for content, news and articles display in Joomla!1.5 reaches level 3. The News Show GK3 is out! and released for the first time along with Aumi August 2008 Template.

Now, with more options available and with possible integration with the PhotoSlide GK2 component by using a specific plugin, News Show GK3 becomes even more that unique and indispensable tool. It's fabulous capabilities well recognized by all Joomla Comunity, enriches your web site in a way that can only represent sucess garanteed.

With diferent languages translation support, News Show GK3 takes the final step to become the one and only, most powerful universal joomla content display module.

So, how do you like to show your web site content to your visitors? No mather wich way, News Show GK3 will be the one!

Notice! The following instructions of News Show GK3 module will be also available in the News Show GK3 Help File that you can find in tools.gavick.com for free download. Another important information is available on update.gavick.com, where you can find any update for this tool or any other Gavick Project.

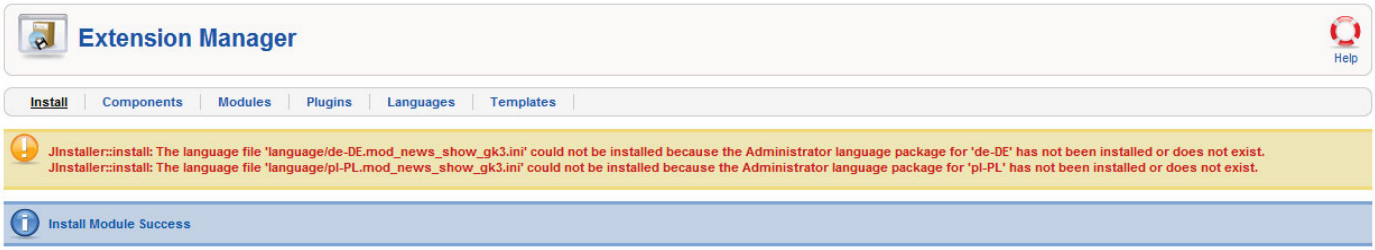
News Show GK3 Installation

Using the Joomla! 1.5 Administrator, navigate to the administrative panel on your site. From the top menu, select Extensions > Install/Uninstall.

Click the 'browse' button, select the component file *(mod_news_show_gk3.zip)* and press 'Upload File & Install.'

A message will appear saying 'Module Installation - Success.'

Notice! After the installation process is done, you should see some messages indicating that it was not posible to create some language files. This warning are quite normal, because if you don't have in your Joomla Web site those languages, the setup of the component will not be able to install those files.



This page will display an overview of the module, then select 'Continue...'

The News Show GK3 is now available on your Modules Manager. So, Let's take a lot now inside of the module configuration and see what's available.

If you want to use the configuration panel options.

Configuration panel - font-size:

If you want to use the font-size increase/decrease option tool panel.

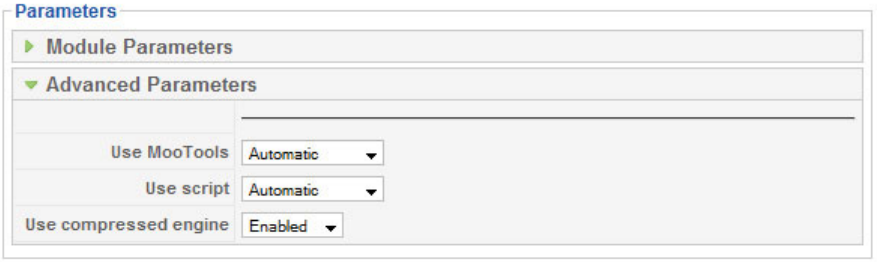
Configuration panel - news amount:

If you want to use the news amount increase/decrease option tool panel.

Module advanced parameters:

Use Mootools:

Use this option only if you have a problem with scripts on your site. In other situations option automatic is strongly recommended. If you want to run more than one copy of this module on same page then set this value for disabled. Also if you have an mootools framework in version 1.11 included on your site, then disable this option also.



Use script:

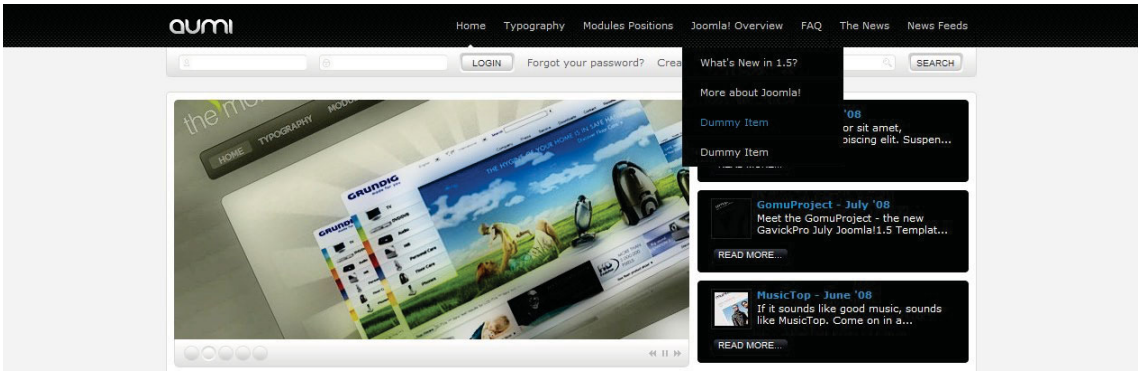
In normal situations, option “automatic” is strongly recommended. Use this option only if you have a problem with scripts on your site. If you want to run more than one copy of this module on same page, then set this value for disabled.

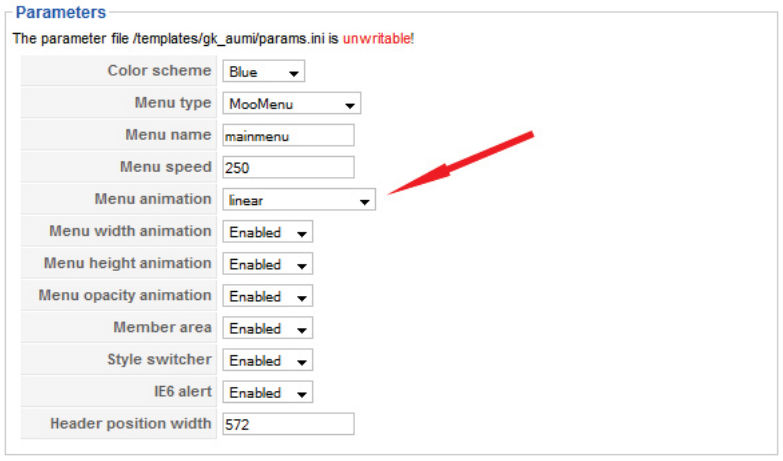
Use compressed engine:

To minimise file size you can use compressed version of engine, but for debugging you should use uncompressed version of engine script (then disable this option). Additionaly - when you use more than one copy of this module per one page, then you must set this same value of this option for all instances of module.

Moomenu with New Animation Effects:

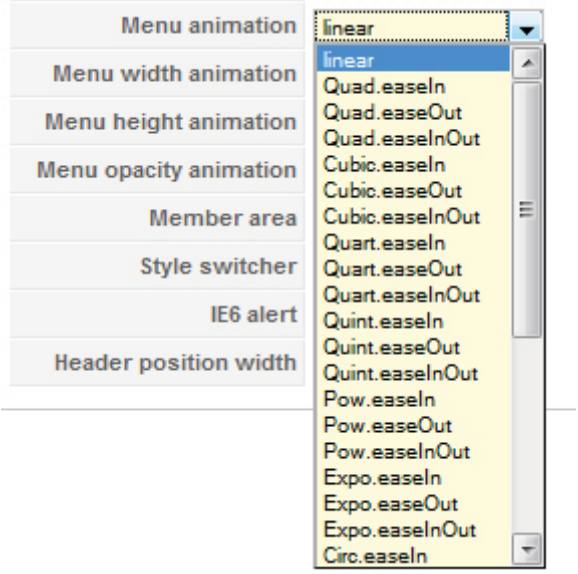
Starting this template, the GavickPro Team improves the MooMenu, including new 34 spectacular animation effects on the action menu.





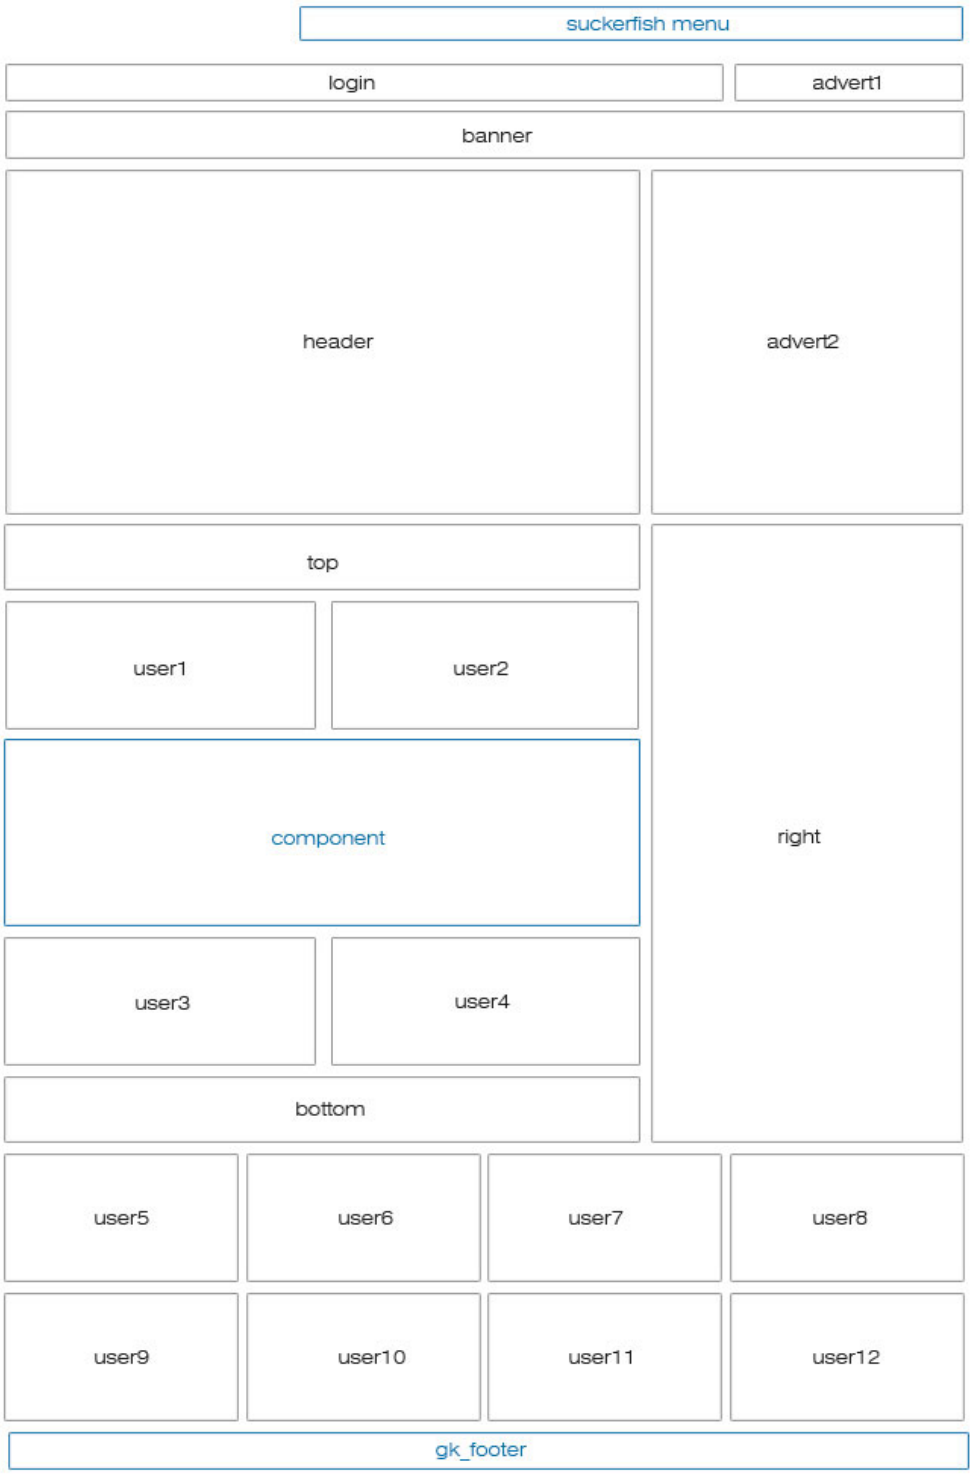
You can select your preferred effect animation by navigating to “Extensions > Templates Manager “ and select the gk_aumi template.

Inside the template parameters, you can selected on the “Menu Animation” drop down menu.



Modules Positions:

Aumi fully supports full width configurations for use with galleries or forums, make sure you do not publish any modules in right and the 'component' will fill the entire width.



9 Typography

This page presents most of typographical aspects of Aumi template. Make your readers happy with great Typography and User Experience!

10 Quick Start Installation

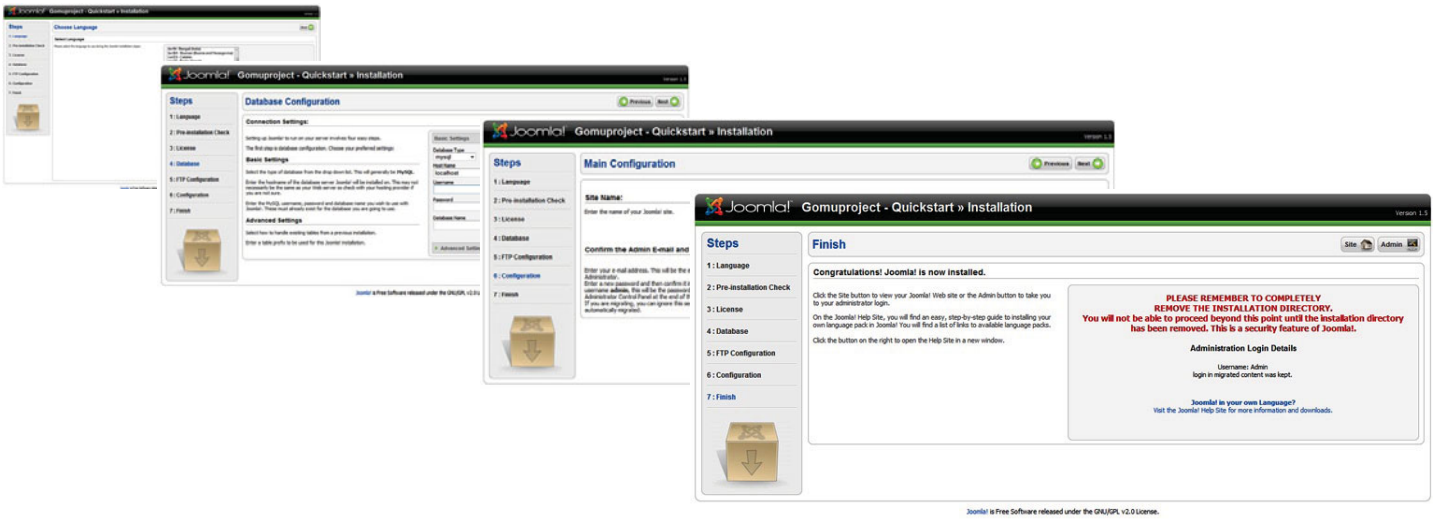
It could not exist more easy way to set your Gavick Aumi Template exactly equal as we show in our demo template page section. In did, this the most easy way installation process! Includes all files needed, the Joomla 1.5.6 stable version, Aumi template, PhotoSlide GK2 component, plugins, extensions, modules and sql demo dump file. All files already fused and for ready for a normal joomla installation.

Installation Steps for the QuickStart version:

Step 1) Unpack the compressed file QUICKSTART-august2008.zip inside of the _quickstart!!! folder and upload the content to your clean joomla website directory folder installation.

Step 2) Create a new Database in your Website.

Step 3) Make a normal Joomla J!1.5 installation using the upload files.

Step 4) After ending the installation, enter in the Administrator using Username “admin” and password “demo” *(You can change this values after).*


! **Sugestion!** You can also make some tests locally with your AUMI Template, using a local server like (i.e. WampServer) or other available for free in the interner. This way, you be able to install, run and test easily all the potencial of this template.
