Britney and the Boys Have a Sleepover

Monday, 30 June 2008 15:21

While Kevin Federline partied in Miami Beach this weekend, Britney Spears stayed at home...with the kids! E! News can confirm that Britney had a 12-hour overnight visit with her two sons Saturday night at her Los Angeles home. "The kids were picked up before noon on Sunday," says a source. It was Spears' first overnight visit since she lost visitation rights with Sean Preston and Jayden James following her infamous visit to the UCLA psych ward in January. Commissioner Scott Gordon, after being presented evidence that Britney's mental health has improved, modified the terms of her visitation last week to allow overnight visits. Meanwhile, K-Fed picked up where he left off in Las Vegas two weeks ago and partied at Miami nightclub Mansion on Friday night.

1 Introducing MusicTop

*"If it sounds like good music, sounds like MusicTop.
Come on in and enjoy the show!"*

The new June 08 GavickPro template theme is designed for Music in all is freedom of Expression.

All about band information, artists, songs, previews, critics, videos clips, pictures, blogs, all that you can imagine, spreading your devoted preferences and love to the music. May you find divine inspiration with Gavick MusicTop.

This is the first Gavick Template where you can find an extraordinary fusion of all the Gavick J!1.5 tools and use them in fully capacities.

Using the amazing PhotoSlide GK1 component and a new exclusive theme module News Image Style, you can make your eloquent and heartfelt tribute to your artists and bands, in the most high quality level design slideshow. It includes the News Show Module GK2, the most advanced tool to show your news and articles content, from any section or categories, in the most flexible and control way and also the GK TabManager GK1 Component to "slide" your style.

Finally last surprise artist of this Show. The new GK Embed Media Player module, witch provides the possibility to embed your Movie Clips, interviews or reportage of your favourite Bands or live show.

An overview of Gavick MusicTop Joomla Template key features:

- Tableless design and 100% css based.
- Build support for the PhotoSlide GK1 component with new exclusive News Image IV module version.
- News Image IV Module Style.
- Build support for the News Show GK2 module.
- Build support for the TabManager component.
- Build support for the NEW Gk Embed Media Player.
- 3 Different colour (Orange – Blue – Green) styles Template.
- Optional IE6 Warning / Upgrade Notification.
- 2 layout options: 2 columns (right + component) and 1 column (component).
- All 18 modules are fully collapsible.
- 3 Module variations built in.
- IE PNGFix Built in.
- Impressive style content built in.
- 2 built in menu options – Suckerfish menu and Mootools.
- Lightweight, modern and very fast-loading design.
- Joomla 1.5 Native.
- W3C XHTML 1.0 Transitional. W3C CSS Valid.
- Fully compatible IE7, Firefox 2+, Flock 0.7+, Netscape, Safari, Opera 9.5
- Delivered with source .psd format (Adobe PhotoShop).
- Delivered with Sql dump content.

MusicTop- Downloading and Overview files

The first step in installing the Gavick MusicTop Template on your Joomla! website is getting all the files available on Gavick Exclusive MemberShip Commercial download section.

All these files will be needed to install the template, modules, plugins and components, and will allow you to customize your website. **Important!** After downloading the **music_top_pack_J!15** file package, it is necessary to unpack the files to your computer.

Here is a brief overview of the files available inside the music_top_pack_J!15 template release.

gk_music_top.tgz - This is the template file installation.

Components - "folder" Here you will reference to downloading the Free Gavick TabManager Gk1 and also the PhotoSlide GK1 Components. **For downloading this two Components, please go to <http://tools.gavick.com>.**

Modules - "folder" Inside you will find the following files:

News Image IV Module- The New and exclusive MusicTop News Image module for PhotoSlide Component (news_image_4.zip).

Notice: This file must be unpack also. Inside, you will find the "install" folder, witch contains the PHP and XML files necessary to install the respective module plugin. Also the PhotoSlide Module Gk News Image 4 (mod_gk_news_image_4.zip).

News Show GK2 Module - Version 2.5.0 of this module for content display (News_Show_GK2_2.5.0.zip).

TabArts 1.1 Module - Version 1.1 of the TabArts Module (TabArts_1.1.zip).

GK Embed Media 1.0 - The New Gavick Module for embedding Media - Version 1.0 for flash media content display (GK_Embed_Media_1.0.zip).

_quickstart!!! - "folder" This is the most easy way installation process! Includes all files needed to set exactly as we show in the demo MusicTop template. It includes the Joomla 1.5.3 stable version, MusicTop template, components, plugins, modules and sql demo dump file. All files already fused and for ready installation

Source - "folder" The source psd. format files for Photoshop Graphic Editor, that you can use for complete customization of your website design. These files include the logo, the three different style page background and navigation buttons. All this files are already sliced and set to customize your MusicTop Template to a different style colours, logo or background.

_doc!!! - "folder" Manual Instruction HelpFile.

Notice! The font type used on the Photoshop source files are not provided with the Template package.

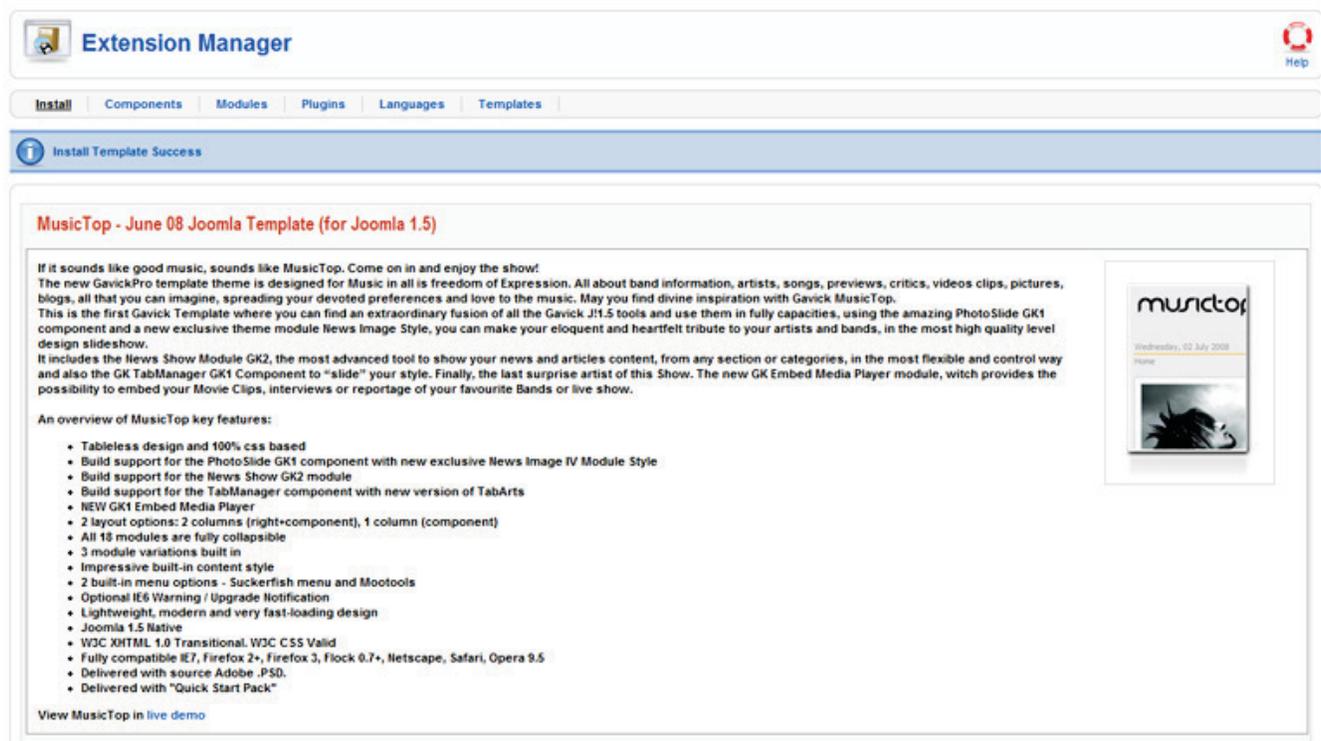

3 Template Installation

MusicTop Template Installation

Using the Joomla! Administrator, navigate to the administrative panel on your Joomla site. From the top menu, select [Extensions](#) > [Install/Uninstall](#).

Click the 'browse' button, select the template file (*gk_musictop.tgz*) and press 'Upload File & Install.' A message will appear saying 'Upload template - Success.'

This page will display an overview of the template, then select 'Continue...'

Screenshot after successful template installation

Go to [Extensions](#) > [Template Manager](#) and set the MusicTop Template as default.

With the template installed, next we are going to show you how to install the others files needed.

4

Components

PhotoSlide GK1 Component Installation

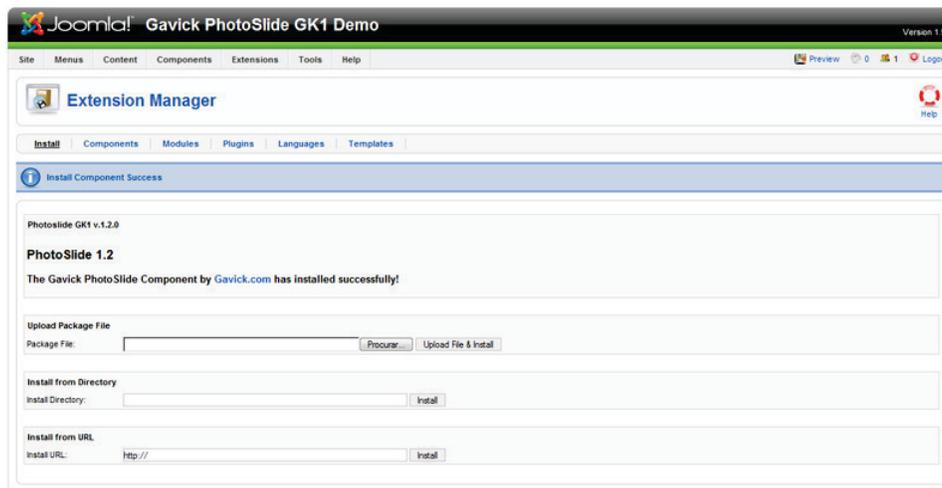

Important !

- First, you must get this Component available for free download on <http://tools.gavick.com>.
- Also you must unpack this file before proceed to next step (*photoslide_pack.zip*).

Using the Joomla! Administrator, navigate to the administrative panel on your Joomla site. From the top menu, select Extensions > Install/Uninstall.

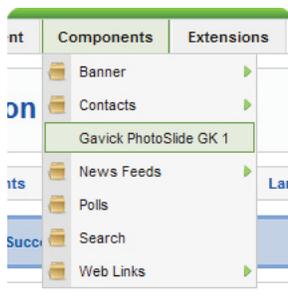

Click the 'browse' button, select the component file inside the Photoslide_GK1 > Component folder (*com_gk_photoslide.zip*) and press 'Upload File & Install.' A message will appear saying 'Upload component - Success.'

This page will display an overview of the component, then select 'Continue...'

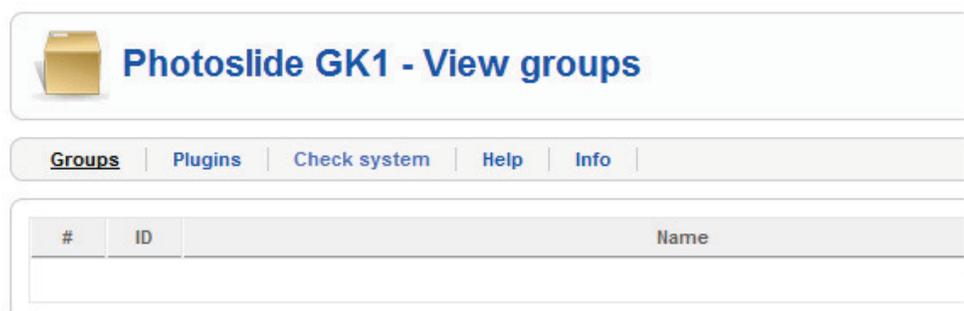

Important ! After doing a successful installation of PhotoSlide GK1 component, we strongly recommend the following step.

Navigate to the main page of the component by going to Components > Gavick PhotoSlide GK 1 (if you followed the installation instructions above this option should be in the list of components). In there, press on the "Check System" option and you be able to see if all conditions are set correctly on your joomla website.

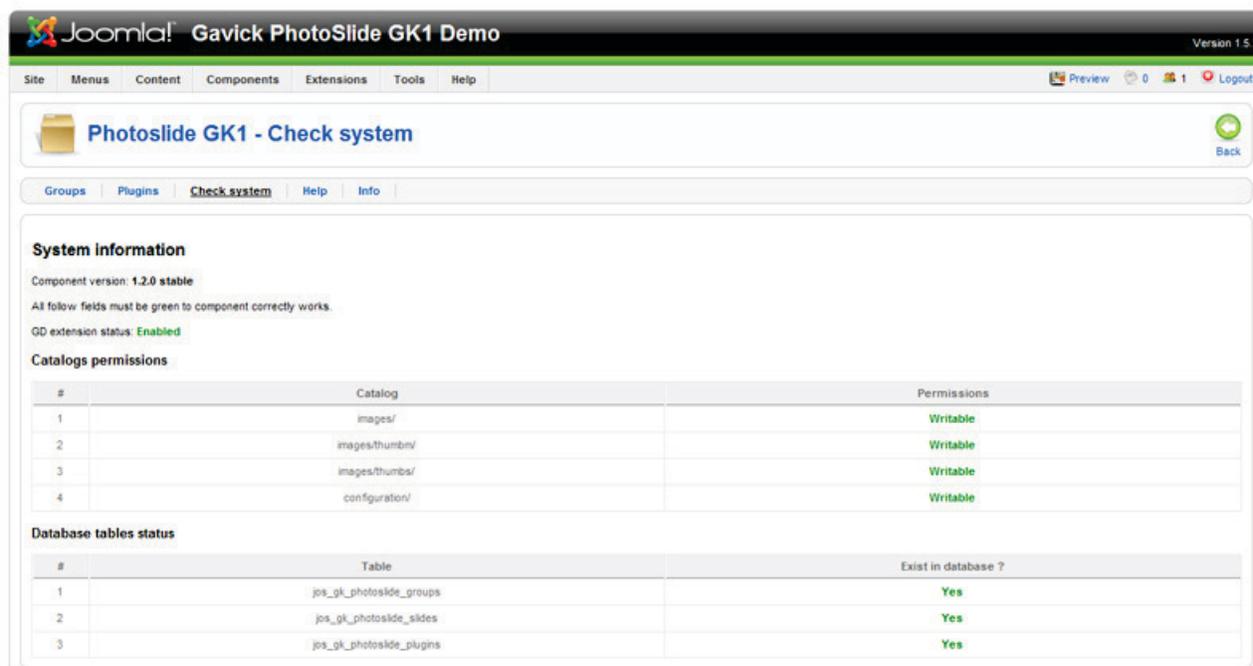

Selecting the PhotoSlide GK1 Component

Check System

See the screenshot example with all conditions set correctly, like green colour indicates.:

Important ! When checking the system, if some field's are with red text colour on the permissions column, you should test the uploading images, because in some cases it may shows initially the warning information, but after doing some tests, it will work perfectly. Also, before adding any group on the Component, at least one plugin must be installed and enable (in this case will be the News Image IV plugin module).

News Image 4 Plugin and Module Installation

(for PhotoSlide GK1 Component)

Before installing the News Image IV module, we must install the respective plugin module.

Please, unpack the **GK_news_image_IV_pack.zip** files and you be able to see the following files:

- mod_gk_news_image_4.zip

- "install" folder - Inside you will find the *gk_news_image_4.xml* and *gk_news_image_4.php* files, necessary to install each plugins to respective modules.

Returning to the PhotoSlide GK1 administration panel, press the "Plugins" option on the component menu and you will see the following message on the board "Any plugins to load...".

Start to install the plugin by pressing the "Install plugin" button on the right menu.

Search the PHP and XML extension files available on the “install” folder and press “Save” to install the plugin.

Important ! To install correctly the plugin, be sure to select the PHP and XML extensions files on the respective upload buttons.

After the upload and installation of the plugin is finish, select the “GK News Image IV” plugin and enable it by selecting the plugin and pressing the right button “Enable Plugin” like the image show’s.

If you follow the installation instruction above, you be able to see the enable Status of the plugin on this icon.

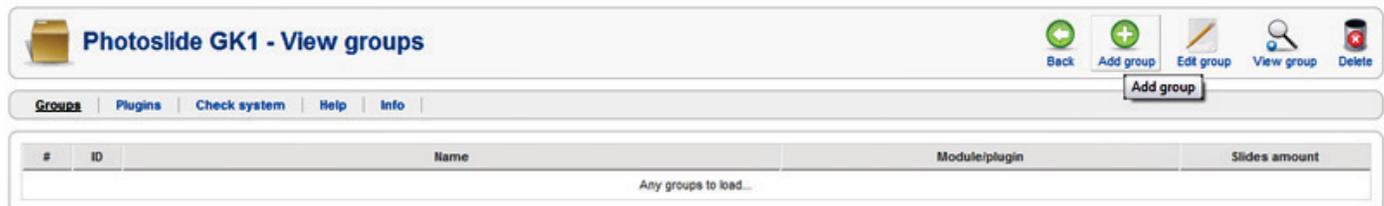

Important ! - If you disable an plugin installed (*not UNINSTALL*) them this plugin is invisible on the list of types of groups when select add group option.

- If you delete an plugin installed, them all groups, slides and images will be deleted also (*we recomend to disable the plugins instead of deleting them, if you have unused plugins.*)

Add groups to PhotoSlide GK1

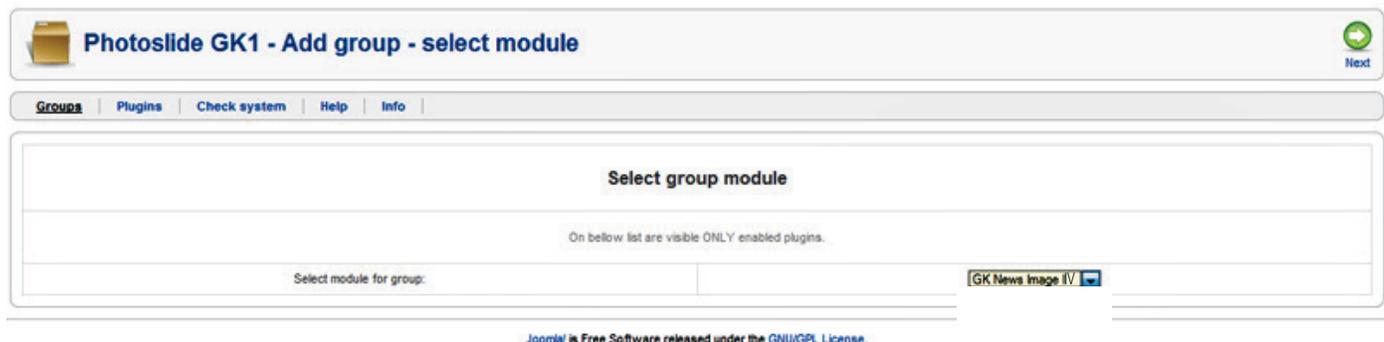

You are ready to add groups to your PhotoSlide GK1 component.

To do this, enter on the [Components](#) > [Gavick PhotoSlide GK 1](#) and press on the right side the “Add Group” button.

By doing this step, you will see the add group panel and below there's the visible list of ONLY the enabled plugins available. We will show you how to create and set a group configuration.

Select on the drop down menu the correspondent News Image plugin module that you want to use on the group (in this example, we will only see the “GK News Image IV plugin” previously installed). Press the “next” button on the right, like it shows on the following screenshot.

After setting the plugin module to your group, the next browser panel is where you will need to set the following fields parameters.

Group Name : The name that you want to give to your group (*just for your orientation*).

Image Width: The width value in pixels of the image to be displayed on the module. Must be an integer value (*don't write “px” after the value*)

Image Height: The height value in pixels of the image to be displayed on the module. Must be an integer value (*don't write “px” after the value*)

Thumbnail Width: The width value to set in thumbnail images to be displayed on the navigation tool. Must be an integer value (*don't write “px” after the value*).

Thumbnail Height: The height value to set in thumbnail images to be displayed on the navigation tool. Must be an integer value (*don't write "px" after the value*).

Background colour: Here's where you set the background colour of the module (*must be in hex format - e.g #000000*)

Title color: The title colour text in the module (*must be in hex format - e.g #FFFFFF*)

Text color: The text colour in the module (*must be in hex format - e.g #000000*)

Link color: The link text colour in the module (*must be in hex format - e.g #FFFFFF*)

Hover link color: The hover link text colour in the module (*must be in hex format - e.g #000000*)

Photoslide GK1 - Edit group	
Group name:	Demo - Header
Image Width:	432 px
Image Height:	330 px
Thumbnail Width:	100 px
Thumbnail Height:	60 px
Background color:	transparent
Title color:	#F7A60A
Text color:	#000000
Link color:	#7850A
Hover link color:	#000000

Screenshot of the "Add Group" parameters setting panel for MusicTop configuration.

Important! The News Image 4 module version supports .png format image with transparent background (8 and 24 bits). To use the option, be sure to set the "transparent" on the Background color option, when editing the group parameters (*See the above screenshot*)

Also, if you need to edit a saved group with this option set, you will need to rewrite again the "transparent" word on background color parameter.

Important! - Please, take note of the Group ID, because it will be need it for the module configuration.

TabManager GK1 Component Installation

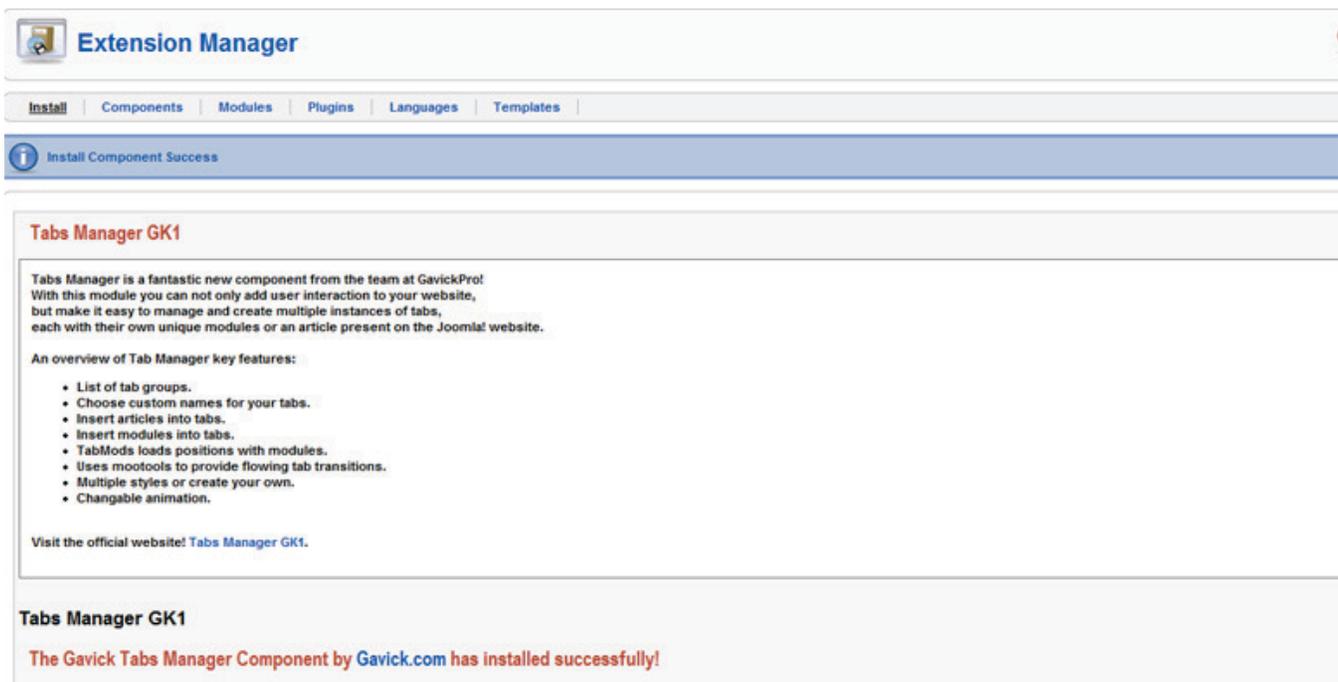

Important !

- First, you must get this Component available for free download on <http://tools.gavick.com>.
- Also you must unpack this file before proceed to next step (*tabsmanager_pack*).

Using the Joomla! Administrator, navigate to the administrative panel on your Joomla site. From the top menu, select Extensions > Install/Uninstall.

Click the 'browse' button, select the component file (*com_tabsmanager.zip*) inside of the tabsmanager_pack folder and press 'Upload File & Install.' A message will appear saying 'Upload component - Success.'

This page will display an overview of the component, then select 'Continue...'

The screenshot shows the Joomla! Extension Manager interface. At the top, there's a navigation bar with 'Install' selected, and other options like 'Components', 'Modules', 'Plugins', 'Languages', and 'Templates'. Below this, a blue banner displays 'Install Component Success'. The main content area is titled 'Tabs Manager GK1' and contains the following text:

Tabs Manager GK1

Tabs Manager is a fantastic new component from the team at GavickPro! With this module you can not only add user interaction to your website, but make it easy to manage and create multiple instances of tabs, each with their own unique modules or an article present on the Joomla! website.

An overview of Tab Manager key features:

- List of tab groups.
- Choose custom names for your tabs.
- Insert articles into tabs.
- Insert modules into tabs.
- TabMods loads positions with modules.
- Uses mootools to provide flowing tab transitions.
- Multiple styles or create your own.
- Changable animation.

Visit the official website! [Tabs Manager GK1](#).

Tabs Manager GK1

The Gavick Tabs Manager Component by [Gavick.com](#) has installed successfully!

TabManager GK1 Configuration

As you notice in the Table Contents, you have Module Section to your support installation. But in this case, I prefer to include in this Chapter the TabArts module installation, to give the correct sense of configuration steps.

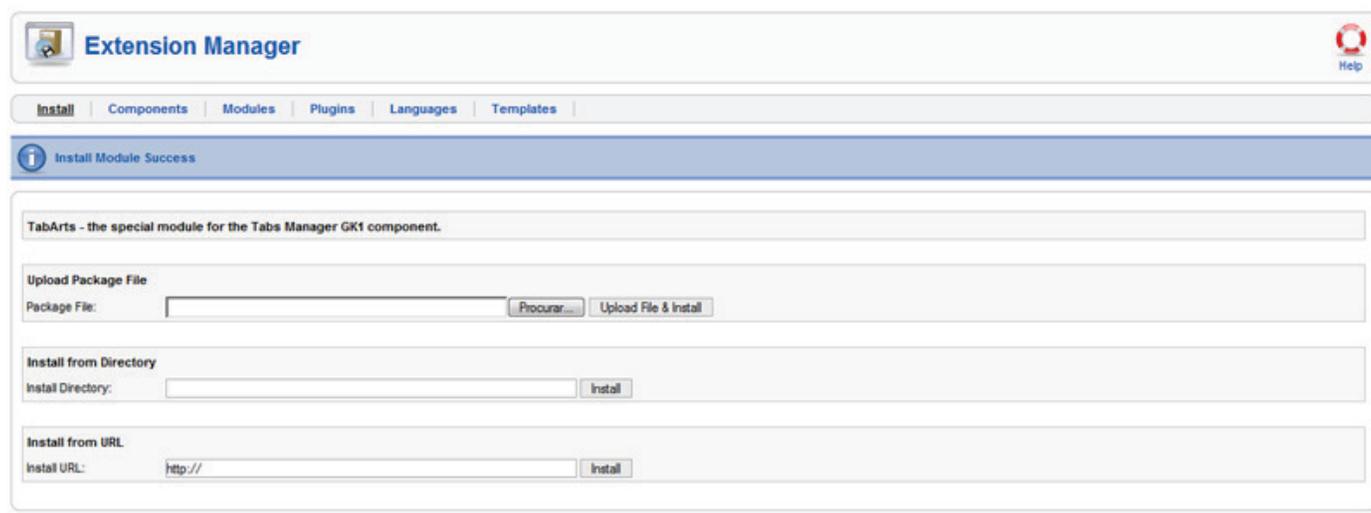

After Successful Component Instalation, before you can add groups on the TabManager, you must install the TabArts 1.1 module. Let's get started them with the Tab Arts 1.1 module installation.

TabArts 1.1 Module Installation

Using the Joomla! Administrator, navigate to the administrative panel on your Joomla site. From the top menu, select [Extensions](#) > [Install/Uninstall](#).

Click the 'browse' button, select the module file (*tabArts_1.1.zip*) inside of the modules folder template pack and press 'Upload File & Install.' A message will appear saying 'Install Module Success.'

This page will display an overview of the component, then select 'Continue...'

The screenshot displays the Joomla! Extension Manager interface. At the top, the title "Extension Manager" is visible, along with a "Help" icon. Below the title, there is a navigation menu with options: "Install", "Components", "Modules", "Plugins", "Languages", and "Templates". A blue banner at the top of the main content area reads "Install Module Success". Below this banner, the text "TabArts - the special module for the Tabs Manager GK1 component." is displayed. The interface is divided into three sections for installation methods:

- Upload Package File:** Includes a "Package File:" input field, a "Browse..." button, and an "Upload File & Install" button.
- Install from Directory:** Includes an "Install Directory:" input field and an "Install" button.
- Install from URL:** Includes an "Install URL:" input field with "http://" pre-filled, and an "Install" button.

Add Groups to TabManager GK1

You are ready to add groups to your TabManager GK1 component.

To do this, enter on the [Components](#) > [Gavick Tab Manager](#) and press on the right side the “Add Group” button.

By doing this step, you will see the add group panel and bellow there’s the visible list of modules available. In this case, you will only see the TABARTS module and select it.

Set the other fields (Group name and description) as you wiss and them press “Save” on the right panel.

Screenshot of add tabs group demo template

#	ID	Tabs group name	Tabs group description	Tabs	Module
1	1	Demo -1	Tabarts	3	tabarts

Returning to Tab manager panel, you be able to see your group. Now you can start to add tab articles by selecting the group and them click on “Add tab” button. Fill the Tab Name, select the respective Tab content articles file and “Save”.

After you set all your tab articles in the group, you be able to view his full articles content.

#	ID	Tab name	Tab content	Order
1	4	Chris Brown	Article: ID: 41 "Chris Brown - The Princess Is..."	1
2	2	Girl Power	Article: ID: 6 "Girl Power"	2
3	1	Rihanna	Article: ID: 42 "Rihanna Performs "Take a Bow"	3

Important !- Please, take note of the Group ID, because it will be need it for the module configuration.

Gavick Embed Media 1.0

Introducing Gavick embed Media 1.0 Module

GavickPro Creative Joomla Development Studio release on his first version, the new Gavick Embedding Media Module (*mod_gk_embed_media.zip*) for Media flash display.

With this great module, you can place your favorite MoviesClips working with direct links media source from YouTube, Google Videos, Daily Motion, Metacafe, Vimeo and others well known Media Source Websites.

You can also display custom flash clips using the Advanced Configuration on the module panel.

Make the eyes and hears of your viewers bump from explosive content.

GK Embed Media Module Installation

Using the Joomla! Administrator, navigate to the administrative panel on your Joomla site. From the top menu, select [Extensions](#) > [Install/Uninstall](#).

Click the 'browse' button, select the module file inside the Modules folder (*mod_gk_embed_media.zip*) and press 'Upload File & Install.' A message will appear saying 'Upload Module - Success.'

This page will display an overview of the module, then select 'Continue...'

GK Embed Media Module Configuration

After successful module installation, from the Menu go to [Extensions](#) > [Modules Manage](#) and enter in panel configuration.

Start by the Basic Module [Parameters](#) by configuring the following fields:

Module Class Suffix - Provides the possibility of set a css class that allow's individual module style.

Module unique ID - Set here the unique ID of module. You can use more than one module on your Joomla! 1.5.3 website. For each one, this ID must be different.

Media URL - Here you must place the URL of the flash movie if Media Source Provider is available on the Drop Down Media Source Menu. (*YouTube Example direct link: http://www.youtube.com/watch?v=VIDEO_ID*). This URL will be automatically changed to http://www.youtube.com/v/VIDEO_ID for the engine module script.)

Exception: In Revver and Viddler Media Players, instead of URL as file ID, you must set as ID only the identification of the file. Example for a Viddler Media File URL: [viddler id=VIDEO_ID&w=437&h=288] the ID must only be the VIDEO_ID value and NOT THE LINK.

For all available Media Source Players, the process is the same by setting the direct URL from the video flash.

Player Width - The width of the media player (*integer value - do not put px after*). Set 0 if you want to use the default player width.

Player Height - The height of the media player (*integer value - do not put px after*). Set 0 if you want to use the default player height.

Media Source - List of Media Source available.

Important ! *If your Media Source Player is not available on this menu, you must choose "Other (...)" option and next on the Advanced parameters, you must set the embed code, as we are going to show you in the following explanation.*

The screenshot shows a Joomla! parameter configuration interface. At the top, there is a blue header labeled "Parameters". Below it, a section titled "Module Parameters" is expanded, showing several input fields: "Module Class Suffix" (empty), "Module unique ID" (containing "gk_embed_media"), "Media URL" (empty), "Player width" (containing "0"), "Player height" (containing "0"), and "Media source" (a dropdown menu currently showing "Other(metacafe, vimeo, flickr)"). Below the "Module Parameters" section is another section titled "Advanced Parameters" which is currently collapsed.

Screenshot of the Parameters demo template.

In this particular module, you have an extensive options available on the [Advanced Parameters](#).

Here's an brief overview of advanced parameters:

Brief Overview of Advanced Parameters.

By selecting one available Media Player on the Module Parameters, you may change it's configuration on each Player.

Naturally, if you pick the YouTube Media Player, the rest of the parameters from others are indifferent.

Each Media Player provide us the possibility to set some different configurations, like size player or the Related Videos Option.

The final field "Advanced configuration of other player" is needed if you choose in Module Parameters a different Media Source Player, different from the available ones. Here you must place the code of the flash media URL

Please, take note of this important notices:

- For Daily motion player options WIDTH and HEIGHT doesn't works - We provide 3 sizes for the player size.
- Like we set before, other player option means every player which can be added by embed tag. So if you don't know how the correctly code of the embed file, them we recommend you to drop this option and select a available Media Player.

News Image 4 *(for PhotoSlide)*

News Image 4 Module Installation

Using the Joomla! Administrator, navigate to the administrative panel on your Joomla site. From the top menu, select [Extensions > Install/Uninstall](#).

Click the 'browse' button, select the module file (*mod_gk_news_image_4.zip*) and press 'Upload File & Install.' A message will appear saying 'Install Module Success.'

This page will display an overview of the component, then select 'Continue...'

You be able to see the following fields parameters to set, like the screenshot shows.

Module Class Suffix - Provides the possibility of set a css class that allow's individual module style.

Module unique ID - Set here the unique ID of module. You can use more than one module on your Joomla! 1.5.3 website. For each one, this ID must be different.

Slides Group ID - Here you must set the ID group that you will use from PhotoSlide GK1. This value must always be INTEGER value (number) and not the name of the group.
Please, check the ID group on the PhotoSlide GK1 administration panel.

Module background colour - Set here in hex format the background colour (e.g. #000000).

Show text block- Enable this option if you want to show articles content linked with slides.

Text block opacity - Opacity text block (values between 0.01 to 1.00).

Text block background - You can select the default background from group configuration or your own value.

Important ! If in your Joomla Website, the use of Mootools is already called by another component or module script, them is highly recommended to avoid most probally problems, that you disable the use of Mootools and enable only the script engine.

After all done, set to the respective position module, enable and save.

Tab Arts 1.1 Module *(for Tab Manager GK1)*

As you may remember for the Tab Manager Configuration Chapter, we already install this Module. So, let's get start with the module configuration.

Using the Joomla! Administrator, navigate to the administrative panel on your Joomla site. From the top menu, select Extensions > Modules Manager and enter on Gk tabarts module.

Here's a brief overview of module configuration parameters:

Module Class Suffix - Provides the possibility of set a css class that allow's individual module style.

Module unique ID - Set here the unique ID of module. You can use more than one module on your Joomla! 1.5.3 website. For each one, this ID must be different.

Height - Height value in px of the module.

Width - Width value in px of the module. (if you set with 0, the module will occupy the default value available on the module template position.

Tab Group ID - Here you must set the ID group that you will use from Tab Manager. This value must always be INTEGER value (number) and not the name of the group. *Please, check the ID group on the Tab Manager administration panel.*

Type of activation - Autoanimation - Animation Type - Logical option values.

Style CSS file: Here you must identify the name of the style file. In thhis case, it will be "musictop".

News Readmore button Text - You can set your own "Read me" more text. Important for your native language.

News Header Link . News Image Link . News Text Link. - All logical values to enable and show or not on the module articles display.

Maximal amonut of words or characters - Must be integer value.

Clean (X)HTML in content- Logical value to enable XHTML encode.

News Image Height -Image height value in px or (%).

News Image Width - Image width value in px or (%).

► **Advanced Parameters**

Important ! If in your Joomla Website, the use of Mootools is already called by another component or module script, them is highly recommended to avoid most probably problems, that you disable the use of Mootools and enable only the script engine, as you can see in the above screenshot.

After all done, set to the respective position module, enable and save.

News Show GK2 (version 2.5.0)

News Show GK2 Module Installation

Using the Joomla! Administrator, navigate to the administrative panel on your Joomla site. From the top menu, select Extensions > Install/Uninstall.

Click the 'browse' button, select the module file (*News_Show_GK2_2.5.0.zip*) and press 'Upload File & Install.' A message will appear saying 'Install Module Success.'

This page will display an overview of the component, then select 'Continue...'

News Show GK2 v.2.1.2

News Show is the universal module for content presentation. The module is easy to use, and a great addition to any site that wants to display news or any content in a news-style format. You can show any read articles from preferred section or category that can be set up from the module parameters. There's also options to set it using one, two or more articles column format. Every news can be display with the title, image, txt. This module uses framework Mootools for control the size of the font and amount of news.

Also have the option:

- height and the width of module
- choose section, category
- the amount of news, links
- button Readmore
- user control panel (use mootools) - users can control the size of the font, amount of news
- fixing the position of images, title, txt. and button Readmore
- option clean (X)HTML in content
- option use ItemID in links
- module class suffix ready

NSII ver.2.1 ChangeLog

- Added optional parameter: show autor
- Added optional parameter: show date
- Added optional parameter: show name of category

NSII ver.2.1.1 ChangeLog

- Fix problem with SEF URLs
- Remove option ItemID
- Some other small code fixes

NSII ver.2.1.2 ChangeLog

- Fix next problem with SEF URLs

NSII ver.2.2 ChangeLog

- Add timezones
- Customizable months and days names
- Fixed problem with mktime - new class to date from Joomla! database
- More options for resize news images
- Fixed problem with width option

NSII ver.2.2.1 ChangeLog

- Add option to disable show frontpage articles in module

NSII ver.2.2.2 ChangeLog

- Some small compatibility and engine fixes

NSII ver.2.5.0 ChangeLog

- Half hour timezones
- User can specify date format
- Author name can be displayed as username or alias
- Module can select articles from range (STARTPOS, AMOUNT+STARTPOS)
- Added option of showing random articles

See the module in action in our [DEMO SITE](#).
Visit the official website! www.gavick.com.

The right screenshot show all the Module Parameters (values of one module available on demo template). For further information support, please download our HelpFile from <http://tools.gavick.com>.

In this 2.5.0 version, we include 3 new option settings.

Date format - All special chars will be replaced: D - full day name, s - shot day name, d - day (number without 0 prefix), z - day (number with 0 prefix), M - full month name, S - short month name, m - month (number without 0 prefix), Z - month (number with 0 prefix), Y - year.

So, order your own date sequence format as you wish.

Author alias name or name - Enable to display Author alias name.

Number of first news - It is used when you need articles in tabmods - you can show first 5 news from category and in other instance you can show next 5 articles (them set this option as 5).

Important ! If in your Joomla Website, the use of Mootools is already called by another component or module script, them is highly recommended to avoid most probably problems, that you disable the use of Mootools and enable only the script engine.

7

Modules Positions

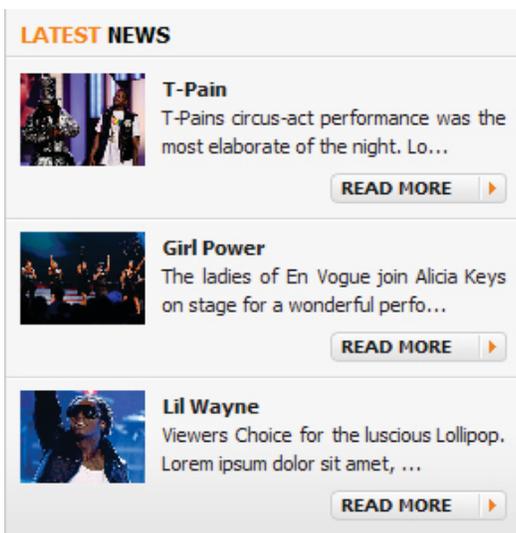

MusicTop fully supports full width configurations for use with galleries or forums, make sure you do not publish any modules in right and the 'component' will fill the entire width.

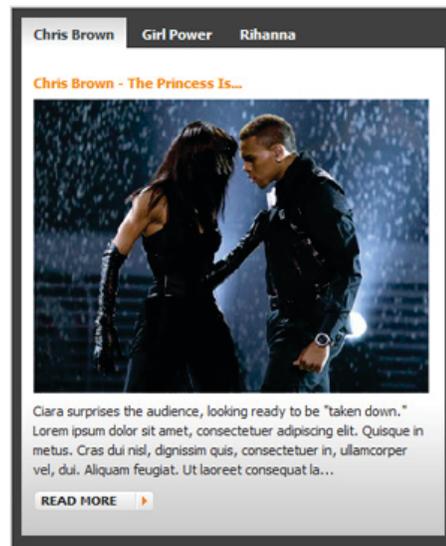

8

Modules Variations

Important! In bottom section (modules position: from 5 to 12) please don't use the any module suffix.

Module News Show GK2 with "-nshow" suffix

Module TabArts 1.1 with "-tab" suffix

For clear style used for example on banner module "-banner" suffix

9

QuickStart!!! Installation

This is the most easy way installation process! Includes all files needed to set exactly as we show in the demo MusicTop template. It includes the Joomla 1.5.3 stable version, MusicTop template, components, plugins, modules and sql demo dump file. All files already fused and for ready installation

Installation Steps for the QuickStart version:

Step 1) Unpack the files of the _quickstart!!! package and upload all the files inside to your clean joomla website folder installation.

Step 2) Create a new Database in your Website.

Step 3) Make a normal Joomla J!1.5 installation using the upload files.

Step 4) After ending the installation, enter in the Administrator using Username “admin” and password “demo” (*You can change this values after*).
