

MediaMogul Basic Customization

A guide to the basic MediaMogul customisation options that can be configured in the template "index.php" file with a description of each of the available options and how they affect the presentation of the template.

MediaMogul features several built in configuration options that have been designed to be easily changed with a single control. You can take advantage of these customisation options by making changes in the **MediaMogul** "index.php" file. Here is a breakdown of the available options:

```
$default_style           = "style1";           //[style1... style6]
$enable_rokzoom          = "true";             // true | false
$enable_pngfix           = "false";            // true | false
$template_width          = "966";              // width in px
$sidebar_width           = "250";              // width in px
$sidebar_side            = "right";            // left | right
$menu_name               = "mainmenu";         // mainmenu by default, can be any Joomla menu name
$menu_type               = "moomenu";          // moomenu | suckerfish | splitmenu | module
$default_font            = "default";          // smaller | default | larger
$show_fontbuttons        = "true";             // true | false
$show_pathway            = "false";            // true | false
$show_moduleslider       = "true";            // true | false

// module slider configuration
$module_slider_height    = 200;                // height in px
$max_mods_per_row        = 3;                  // maximum number of modules per row (adjust the height if this wraps)
$modules_list            = array(array("title"=>"Group 1 Title", "module"=>"user12"),
                                   array("title"=>"Group 2 Title", "module"=>"user13"),
                                   array("title"=>"Group 3 Title", "module"=>"user14"),
                                   array("title"=>"Group 4 Title", "module"=>"user15"),
                                   array("title"=>"Group 5 Title", "module"=>"user16"));
```

Default Style

MediaMogul has 6, pre-made styles that can be easily selected from the option shown below. Simply change the settings between the two " " tags to your style of choice.

```
$default_style           = "style1";           //[style1... style6]
```

RokZoom Enabled

RokZoom, a powerful and highly presentational script can sometimes come into conflict with other javascript libraries, you can disable it with the following settings.

```
$enable_rokzoom          = "true";             // true | false
```

Template Width

You have the ability to select, with ease, the width of the template. The setting below is what you edit to either reduce or increase templates width. You can also set to fluid with is 100% so there template will adapt to your resolution.

```
$template_width          = "966";              // width in px
```

Sidebar Width

With the following setting, you can control the width of the sidebar with one simple setting.

```
$sidebar_width           = "250";              // width in px
```

Sidebar Side

With the following setting, you can control which side the sidebar is allocated

```
$sidebar_side            = "right";            // left | right
```

Enable PNGfix

With the following setting, you can control whether the PNGfix loads.

```
$enable_pngfix          = "false";           // true | false
```

Menu Name

The following parameter controls which Joomla! menu is loaded for the horizontal navigation bar. Therefore, you can create your own custom menu to load independent from any menu module on your site. The possibilities are endless.

```
$menu_name              = "mainmenu";         // mainmenu by default, can be any Joomla menu name
```

Menu Type

MediaMogul has the 4 options for the horizontal navigation bar. You can either, select moomenu, the latest menu addition; suckerfish, the basic vertical dropdown menu; splitmenu, the popular classic or have the area as a separate module position.

```
$menu_type              = "moomenu";          // moomenu | suckerfish | splitmenu | module
```

Default Font Size

Based on your own personal preference or the preference of your users; you can easily set the default font size of the text in your site by editing the following line:

```
$default_font = "default"; // smaller | default | larger
```

Show Font Buttons

Use the following setting to disable the font access buttons.

```
$show_fontbuttons       = "true";             // true | false
```

Show ModuleSlider

Use the following setting to disable the integrated Tabber.

```
$show_moduleslider      = "true";             // true | false
```

Show Pathway

Sometimes sites just look better with no pathway, and we've provided a convenient toggle to allow you to disable this for your site

```
$show_pathway = "true"; // true | false
```

Module List

With the setting illustrated below, you can control the aspects of the integrated rokslide feature to a great extent. You can control the tab title and also the module position which appears in each of the tabs.

In the code snippet, we have 5 lines; each line controls a single tab. Each line is segregated into 2 distinct parts. These are **"title"=>"Tab Title"**, which controls the Tab Title. The second part is **"module"=>"Module Position"**),

```
$modules_list = array(array("title"=>"Group 1 Stuff", "module"=>"user12"),  
    array("title"=>"Group 2 Panel", "module"=>"user13"),  
    array("title"=>"Group 3 Collection", "module"=>"user14"),  
    array("title"=>"Group 4 Assortment", "module"=>"user15"),  
    array("title"=>"Group 5 Items", "module"=>"user16"));
```

Module Slider Height

This setting controls the height of the Module Slider in pixels.

```
$module_slider_height = 200; // height in px
```

Module Count

The module configuration variable below controls how many consecutive modules you can have for a position.

```
$max_mods_per_row = 3; // max number of modules per row (if wraps, adjust height)
```
