

MediaMogul Demo Content

The demo for MediaMogul utilises a large stock of custom code and styling to make the most of every content item and show what MediaMogul can do. This basically means that the HTML used in the custom modules and content have customisations which employ the characteristics of the template to make the "perfect" content.

This demo content section will take you through some of the content areas and general techniques used to further your understanding and help you realise the true potential of MediaMogul. If you would like to quickly deploy a replica of our MediaMogul demo for a new Joomla site, be sure to check out our RocketLauncher package.

RokNewsRotator

Brand new for MediaMogul is the RokNewsRotator. The RokNewsRotator can display your top stories of the day and beautifully fades between them, giving your site a professional appearance. You can see this effect in action at the top of the main column on the front page of the demo. The setup is listed below.

To enter custom classes into your content, you may first need to disable the default Joomla WYSIWYG editor as it will strip out these classes when the item is saved. You can do this from your control panel by going to Site > Global Configuration and setting Default WYSIWYG Editor to No WYSIWYG Editor.

* In the Joomla Administrator, go to Site > Content > Static Content. Select the New icon at the top right of the control centre.

* Setup the static content item with the normal configuration, setting the fields for title, published etc..

* Make sure your images are uploaded to your Joomla! /images/stories folder.

* Scroll down to the large white box at the footer area of the content control area.

* Insert the following at the top of this text box

```
<script type="text/javascript" src="templates/rt_mediapogul/js/roknewsrotator.js">
</script>
```

```
<script type="text/javascript">
    window.addEvent('domready', function() {
        var rotator = new RokNewsRotator('news-rotator', {
            delay: 7000,
            duration: 800,
            corners: false,
            autoplay: true
        });
    });
</script>
```

```
<div id="news-rotator">
    <div class="story-block">
        <div class="image">
            
        </div>
        <div class="story">
            <div class="padding">
                <h1>Imperials on Tatooine</h1>
                <p>In a bold move, the Empire task force has landed on the desert planet of Tatooine in force. It's rumored that they are searching for one very annoying droid and his tiny companion, who may hold the key to the survival of the galaxy.</p>
            </div>
        </div>
    </div>
    <div class="story-block">
        <div class="image">
            
        </div>
        <div class="story">
            <div class="padding">
                <h1>New Y-Wing Released</h1>
                <p>Featuring the amazing new golf ball thruster technology, the
            </div>
        </div>
    </div>
</div>
```

rebel alliance has publicly announced the development of their new secret weapon, the deadly Y-Wing. In addition to golf ball thrusters, it also features an oak interior with chrome hardware.</p>

```
</div>
</div>
</div>
<div class="story-block">
  <div class="image">
    
  </div>
  <div class="story">
    <div class="padding">
      <h1>Firefighters Save the Day!</h1>
      <p>The smell of melted plastic was in the air as the well known egoLand Tower went up in flames. Firefighters from multiple sets converged on the location in a desperate attempt to extinguish the flame as quickly and safely as possible.</p>
    </div>
  </div>
</div>
</div>
```

RokVideoScroller

Below are the instructions for setting up the RokVideoScroller to display your videos. To enter custom classes into your modules and content, you may first need to disable the default Joomla WYSIWYG editor as it will strip out these classes when the item is saved. You can do this from your control panel by going to Site > Global Configuration and setting Default WYSIWYG Editor to No WYSIWYG Editor.

- * In the Joomla Administrator, go to Site > Site Modules. Select the New icon at the top right of the module control centre.
- * Setup the custom module with the normal configuration, setting the fields for position, published etc..
- * Scroll down to the large white box at the footer area of the module control area.
- * Insert the following at the top of this text box

```
<script type="text/javascript" src="templates/rt_mediapogul/js/
rokvideoscroller.js"></script>
<script type="text/javascript">
  window.addEvent('domready', function() {
    var x = new RokVideoScroller('video-list',{
      'duration': 1000
    });
  });
</script>
<div id="video-list" class="video-list">
  <div class="video">
    <div class="left">
      
    </div>
    <div class="desc">
      <p>Empire Stops Drunk Drivers</p>
      <p><a href="#">Watch Video</a></p>
    </div>
  </div>
  <div class="video">
    <div class="left">
      
    </div>
    <div class="desc">
      <p>Pilot Upset Over Crash</p>
      <p><a href="#">Watch Video</a></p>
    </div>
  </div>
  <div class="video">
    <div class="left">
      
    </div>
```

```

</div>
<div class="desc">
  <p>Politicians Hold a Summit</p>
  <p><a href="#">Watch Video</a></p>
</div>
</div>
<div class="video">
  <div class="left">
    
  </div>
  <div class="desc">
    <p>Popular Pub Past Prime</p>
    <p><a href="#">Watch Video</a></p>
  </div>
</div>
<div class="video">
  <div class="left">
    
  </div>
  <div class="desc">
    <p>Animal Couples Go Boating</p>
    <p><a href="#">Watch Video</a></p>
  </div>
</div>
<div class="video">
  <div class="left">
    
  </div>
  <div class="desc">
    <p>Here's Looking at You Kid</p>
    <p><a href="#">Watch Video</a></p>
  </div>
</div>
<div class="video">
  <div class="left">
    
  </div>
  <div class="desc">
    <p>Riots In BlockTown Again</p>
    <p><a href="#">Watch Video</a></p>
  </div>
</div>
<div class="video">
  <div class="left">
    
  </div>
  <div class="desc">
    <p>Unhappy Pet Seeks Vengeance</p>
    <p><a href="#">Watch Video</a></p>
  </div>
</div>
<div class="video">
  <div class="left">
    
  </div>
  <div class="desc">
    <p>Hunting Season Opens Today</p>
    <p><a href="#">Watch Video</a></p>
  </div>
</div>
</div>

```

Tabbed Modules

MediaMogul features an exciting new RokSlide powered tabbed module system. It is designed to allow you to publish your modules into the designated locations, creating tabs for each module position which you can customise. Currently, MediaMogul uses the User10-16 module positions for your tabs plus other module positions. By default, Joomla does not include these module positions, so these must be created in the Joomla admin.

They can easily be created in your Joomla administrator by going to Site > Template Manager > Module Positions In the first available "empty" module position fields, type in the name "user10" in one, and "user11" in another. Next, click Save in the top right corner. Now, you will be able to utilise the "User10" and "User11" module positions when assigning your module's positions in the Module Manager. Do the same for User12, User13 and User14 and User15 and User16.

Read More Buttons

Read more buttons are automatically generated for content items that use the intro and main text option. However, you can easily insert them manually as witnessed on this demo. Use the following code:

```
<a href="your_link" class="readon">Read More...</a>
```
