MooMenu Submenu Out Background Duration	<input type="text" value="600"/>
MooMenu Submenu Out Background Transition	<input type="text" value="Expo.easeOut"/>
MooMenu Submenu Top offset	<input type="text" value="3"/>
MooMenu Submenu Right offset	<input type="text" value="1"/>
MooMenu Submenu Bottom offset	<input type="text" value="0"/>
MooMenu Submenu Left offset	<input type="text" value="1"/>

### **Preset Style**

The template is bundled with 6 pre-made style variants that can be easily and quickly chosen from the template configuration.

### **Module Block Style**

Due to the complex nature of the template, module hilites will now be global, as controlled by the template settings. Each module position's styling can be controlled by these settings such as User1 and Showcase3.

### **Display Frontpage Component**

This setting allows you to select whether the frontpage area (where content items are placed) is active or not. This is useful if you wish to have an entirely modular frontpage and no article-based content.

### **IE6 Warning**

Warn your visitors using Internet Explorer 6 to upgrade to a more secure version with this toggle. This option activates a javascript based dropdown in IE6 at the top of the template where a description of why IE6 is a redundant browser is visible. The warning will only appear once as its stored via a cookie.

### **Font Family**

You can choose which font you would like to use for your content item, these are all web standard fonts.

### **Font Spans**

Set to Enable or Disable Font Spans. Font Spans refer to the multi-coloured effect on titles, such as module headers.

### **Input Style**

Set to Enable or Disable Input Styles. This is the javascript enabled custom styling for radio icons and similar inputs such as in the Poll. You can see these icons in the params above.

### **Input Style Exclusion**

Set the IDs and Classes of elements you wish to be excluded from the input styling.

### **Template Width**

This template configuration option allows you to easily change the width of the template itself, simply change the number to another pixel value.

### **Left Column Width**

This template configuration option allows you to easily change the width of the left column, simply change the number to another pixel value.

### **Right Column Width**

This template configuration option allows you to easily change the width of the right column, simply change the number to another pixel value.

### **Left Inset Width**

This template configuration option allows you to easily change the width of the left inset position, simply change the number to another pixel value.

### **Right Inset Width**

This template configuration option allows you to easily change the width of the right inset position, simply change the number to another pixel value.

### **Splitmenu Location**

One of the template's menu options is splitmenu which displays the first and second level items in the horizontal menu bar and the 3rd in a side column module. This option allows you to choose between the left or right column.

### **Default Font**

This option allows you to choose what the font size will be, you have 3 options to choose from, these are small, default and large.

### Show Date

Choose whether the date, in the upper left of the template appears.

### Client Side Date

Select whether the date is server based or based on the time and date of your visitors computer..

### Show Main Logo

Choose whether the logo area has the template logo image, or is the logo module position. If this option is set to no and there are no modules assigned to the logo area, it will collapse completely.

### Show Copyright

Choose whether the copyright area has the RocketTheme logo image, or is the footer module position. If this option is set to no and there are no modules assigned to the footer area, it will collapse completely.

### Show Text Size Controls

This setting allows you to disable the text size controls in the upper right of the template.

### Third Party Extensions Styling

The majority of template-side CSS for the support 3rd party extensions are located in extras.css. This option, when disabled, will not load the file, thus providing better performance due to the non-loading of a redundant file.

### Mootools/Javascript Compatibility

Enable or disable js compatibility mode for better compatibility with non mootools based js libraries. Warning, setting to "true" will cause several js template features to not work properly.

### Sortable Elements

A major feature of Affinity is the sortable feature, that being the interactive movement of areas of the template. By selecting the tags next to specific areas, you can move them horizontally or vertically within the template. All these options control the various aspects of the feature, from activation, opacity, roundness, and more.

### Menu Type

Affinity is bundled with 4 menu options, 3 of which are integrated menu approaches. These are splitmenu, moomenu, suckerfish and module. Splitmenu displays the 1st level menu items in the horizontal bar and the 2nd in the side column; moomenu and suckerfish display the menu items in dropdown lists with moomenu having a javascript powered approach; and the module options turns the menu bar into the **toolbar** module position so you can insert modules into the area (this will disable the menu however). You can also select none so the entire horizontal menu does not appear.

### Dropdown Rows Per Column

The maximum number of menu item rows per column. Applicable only to MooMenu and Suckerfish, as well as second+ menu levels.

### Dropdown Columns

The number of columns for a dropdown. Applicable only to MooMenu and Suckerfish, as well as second+ menu levels.

### Multi-Column Level

The menu level that is affected by the multiple column dropdown affect. Set to 0 to affect all dropdown levels or set a number greater than 0 to specify a particular level with the multiple column function. Applicable only to MooMenu and Suckerfish.

## Menu Name

The following parameter controls which Joomla menu is loaded for the horizontal navigation bar, by default this is mainmenu but you can change it to whatever menu such as othermenu.
