

## Extensions

Learn all about the exciting RocketTheme exclusive extensions that are included in the SolarSentinel template release. Here you can find instructions for installation and configuration for each of the custom extensions/addons.

### Step One: Installing the Extension

Download the **solarsentinel-extensions-j15.zip** archive from the SolarSentinel download section of the RocketTheme Joomla! Club. Unzip the archive and inside you will find individual zip files for each of the extensions. Login in to your administrator console on your Joomla! website and navigate to the **Extensions** menu item, and select **Install/Uninstall** from the dropdown menu. In the **Upload Package File** section, click the **Choose File** button and select one of the **extension\_name.zip** that was inside of the zip file you downloaded earlier. Next click the **Upload File & Install** button to install the module.

### Step Two: Publishing the Module/Plugin

Now the module is installed it must be published in the appropriate module position and configured to suit our needs. From the top menu, select **Extensions** → **Module Manager**. This will take you to the **Site Module Manager** which allows you to configure the placement and configuration of all modules in your Joomla website. Locate the module from the list. Remember there could be a few pages. Once you have found it, you can publish in 2 ways: The first is selecting the cross next to the tile or clicking the title then set **Publish** to **Yes** followed by Save. Plugins behave in a similar way, simply go to **Extensions** → **Plugin Manager** and enable the plugin. You can also configure it from the same manager.

### RokModules Required

In order for the new SolarSentinel modules to function, you must install com\_rokmodules. This component facilitates the modules, as Roknavmenu does for the integrated menu. Follow the instructions below:-

1. Download solarsentinel-extensions-j15.zip from RokDownloads.
2. Extract the zip onto your computer.
3. Go to Extensions then select the Upload File & Install button.
4. Find com\_rokmodules.zip and in install.

Now all the new modules are functional

### Parameters Guide

We will take a quick look at the parameters you will find when you install this module. There are 4 columns, parameters, options, demo and description. The parameter column lists each available setting for the module; options lists the available options to choose from; demo lists the options chosen on the demo and description outlines what the module does.

## RokStories Module

RokStories is a great module to display your articles and accompanying images as a featured item. The module itself is facilitated by Mootools to transition between images and articles seamlessly. Perfect for showcasing featured articles on your site, as seen on the frontpage.
