

## Vertigo Module Positions

Vertigo has been constructed with an assortment of 32 module positions allowing for versatility and flexibility. Most of these module positions are fully collapsible meaning that if there are no modules published in particular area, that module area will not be shown.

The image displays a Joomla! website theme named "Vertigo" with various module positions. At the top, there is a "TOOLBAR" with links for "Typography", "Tutorials", "J! Stuff", and "Wrapper". The main content area features a "Showcase Module" on the left and a "Module Header" on the right. Below the header, there are several "Module User" positions (USER1 to USER6) and "Module Variations" (INSET1, INSET2). At the bottom, there are "Module Advert" positions (ADVERT1 to ADVERT3) and a "FOOTER" section with a "DEBUG" button.

**TOOLBAR** Typography Tutorials J! Stuff Wrapper

**Vertigo** Dec 08 Design

**Showcase Module**  
This is the Showcase module position, which appears to the left of the showcase area.

**Module Header**  
This is the Header module position, this location is perfect for important content and will disappear if not published, this is the Header/BANNER area.
